1: The Gold-Vision Administration Console

The **Gold-Vision Administration Console** provides the tools to configure Gold-Vision to your organisation's requirements, and manage ongoing changes.

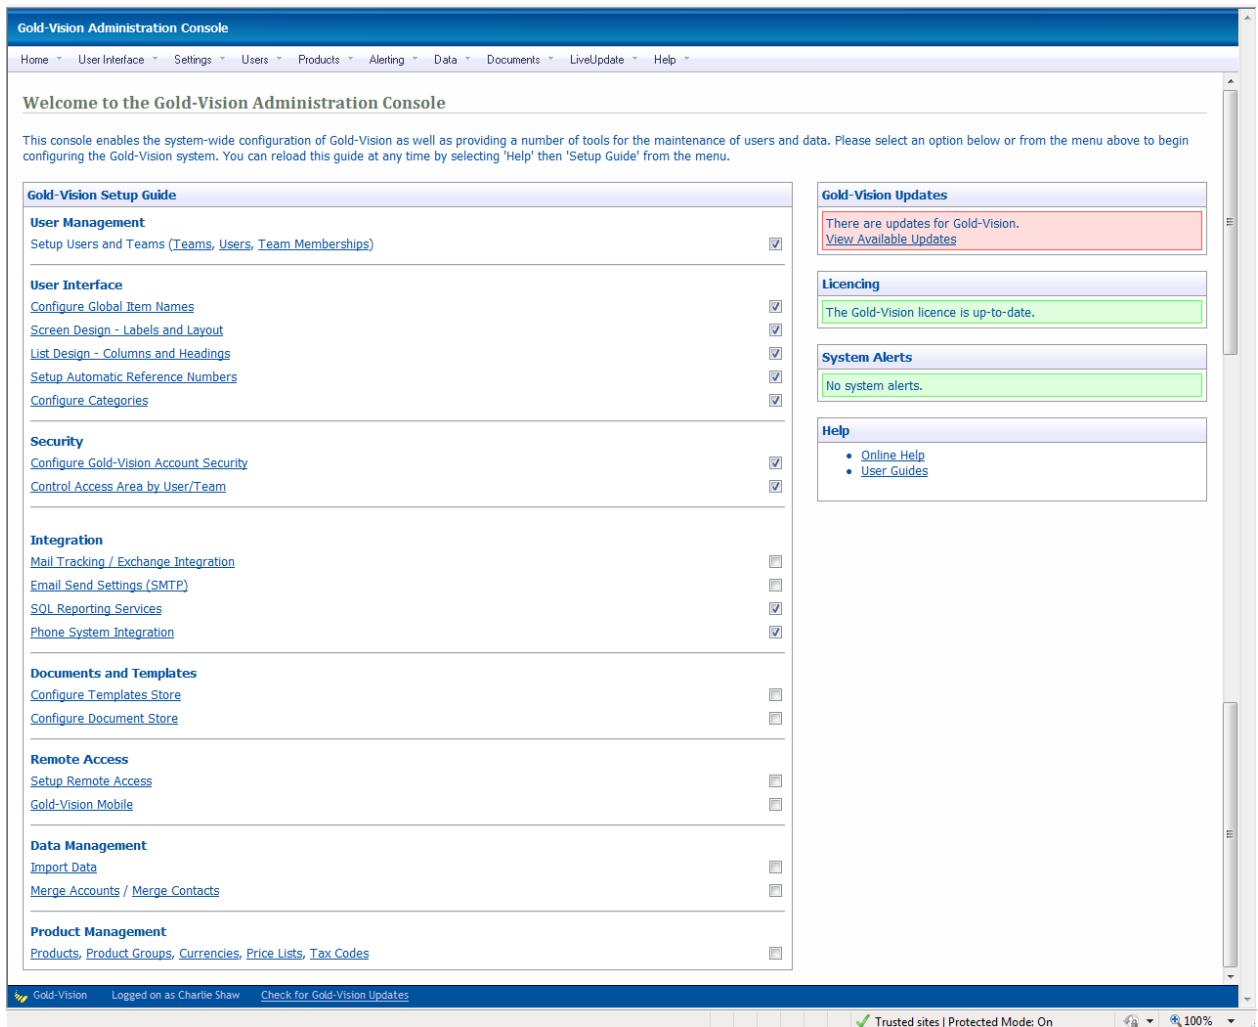

You may access the Gold-Vision Administration Console from the Gold-Vision Tools menu, or use Internet Explorer to go to:

http://goldvisionservername/gold-vision/admin

The Gold-Vision Administration Console is only available for use by authorised **Gold-Vision** administrators.

Navigating the Gold-Vision Administration Console

On opening the Gold-Vision Administration Console, the Welcome screen will be displayed. This is designed to provide status information, and a logical setup approach for Gold-Vision.

Please note that data import is managed using a specialist tool. Selecting the "Import" option in the Data menu will take you to a screen where you can download and install the import tool on your computer. On-line help is available directly from this application.

The menu along the top of the Console allows you to access different functions, as follows: **Home** – returns you to the Welcome Page

User Interface – Much of the configuration is accessed from here; Screen Design, List Design, Dropdowns, Reference Numbering, Categories and Global Label Update.

Settings – This is a more technical area, used to set the Gold-Vision environment. Access to Server settings, Security, Reporting setup, Gold-Schedule and Mail-tracking settings plus Licencing, Live Update and Logs.

Users – Manage Users, Teams, Team Memberships and User Access Options.

Products – Manage Products, Product Groups, Foreign Currencies, Price Lists and Tax Codes.

Integrations – View and manage integrations with Gold-Vision

Alerting* – Configure and View Alerts and workflow processes. * In earlier versions, this may not have been made visible – contact Gold-Vision support for an updated licence key if required.

Data – These features have been transferred from the Database Administration tool, and allow you to merge duplicate records, undelete records, import data or run scripts provided by us without requiring access to the SQL server tools. This area also includes settings for Lead Management.

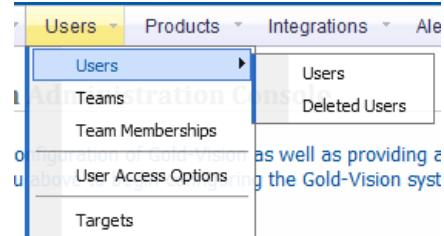

Documents – Configure paragraphs (defined blocks of text for use in templates). Define your document saving parameters.

LiveUpdate – Run the LiveUpdate process to download and install updates.

Help – Access to Admin Help, submit a Support Enquiry, access Diagnostics and Product Information.

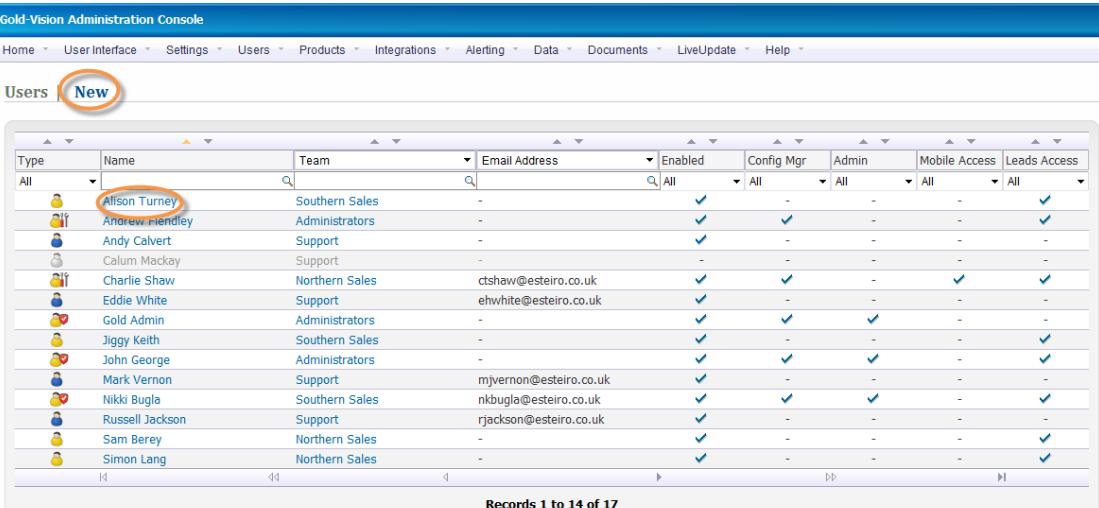

2: User Management

You will have decided from the Planning and Scoping Session (see Project Planning documents), who your users are, and what access to Gold-Vision they require. *It is also key to establishing security rules, and therefore it is one of the first implementation steps.*

Users > View Users

To view a list of all Gold-Vision users, select **Users** then **View Users** from the main menu.

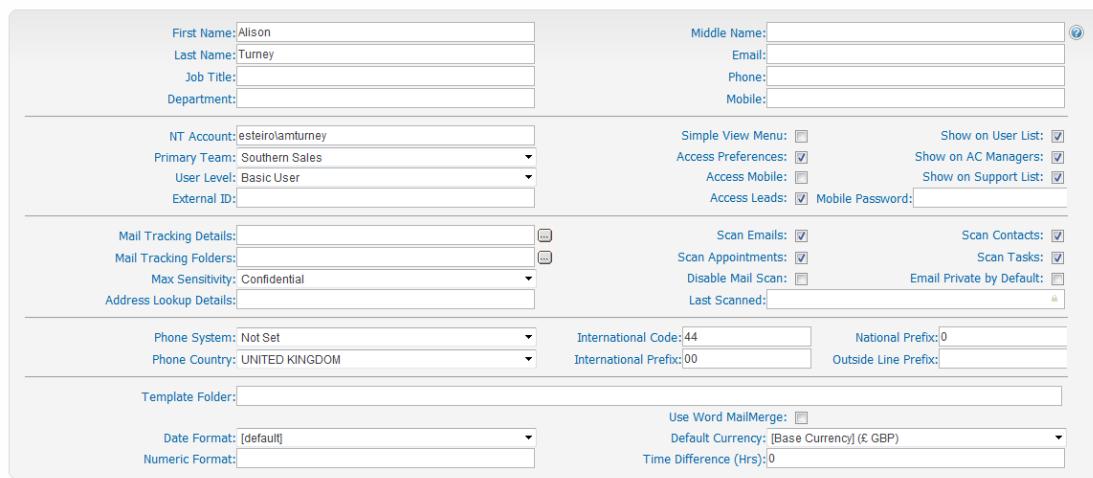

Type	Name	Team	Email Address	Enabled	Config Mgr	Admin	Mobile Access	Leads Access

Records 1 to 14 of 17

Editing an existing User – To edit an existing User, click on their name from the list. The User edit screen will open in a new window. Make any changes necessary and then click **Save**. A *detailed description of the user screen fields is explained below.*

User - Alison Turney

This is a Gold-Vision User. This is a basic Gold-Vision user that has access to the system enabled.

First Name: Alison	Middle Name:	
Last Name: Turney	Email:	
Job Title:	Phone:	
Department:	Mobile:	
NT Account: esteiroalisonturney	Simple View Menu: <input type="checkbox"/>	Show on User List: <input checked="" type="checkbox"/>
Primary Team: Southern Sales	Access Preferences: <input checked="" type="checkbox"/>	Show on AC Managers: <input checked="" type="checkbox"/>
User Level: Basic User	Access Mobile: <input type="checkbox"/>	Show on Support List: <input checked="" type="checkbox"/>
External ID:	Access Leads: <input checked="" type="checkbox"/>	Mobile Password: <input type="password"/>
Mail Tracking Details:	Scan Emails: <input checked="" type="checkbox"/>	Scan Contacts: <input checked="" type="checkbox"/>
Mail Tracking Folders:	Scan Appointments: <input checked="" type="checkbox"/>	Scan Tasks: <input checked="" type="checkbox"/>
Max Sensitivity: Confidential	Disable Mail Scan: <input type="checkbox"/>	Email Private by Default: <input type="checkbox"/>
Address Lookup Details:	Last Scanned: <input type="text"/>

Phone Country: UNITED KINGDOM	International Prefix: 00	Outside Line Prefix: <input type="text"/>
Template Folder: <input type="text"/>	Use Word MailMerge: <input type="checkbox"/>	
Date Format: [default]	Default Currency: [Base Currency] (£ GBP)	
Numeric Format: <input type="text"/>	Time Difference (Hrs): 0	

Save Delete Preferences Cancel

The **Preferences** button allows an administrator to edit a user's homepage options.

Adding a new User – Users > New > User click the **New** tab. The new User screen will open in a new window. Enter the User details, select a **Primary Team** and click **Save**.

Deleting a User – To delete a User, change their User Level to “Disabled” and transfer Account or Contact ownership using the “Replace” function – see main Gold-Vision User Guide. This will not remove ownership of items. Any users who currently have access to those Accounts will still have access.

Moving a User between Primary Teams – To move a User, open the user by clicking on their name then choose a new **Primary Team** from the drop down selection. Finally, click **Save**.

The User Screen – The user screen is the same for new or editing. The table below explains each of the fields. To save changes, please click the **Save** button.

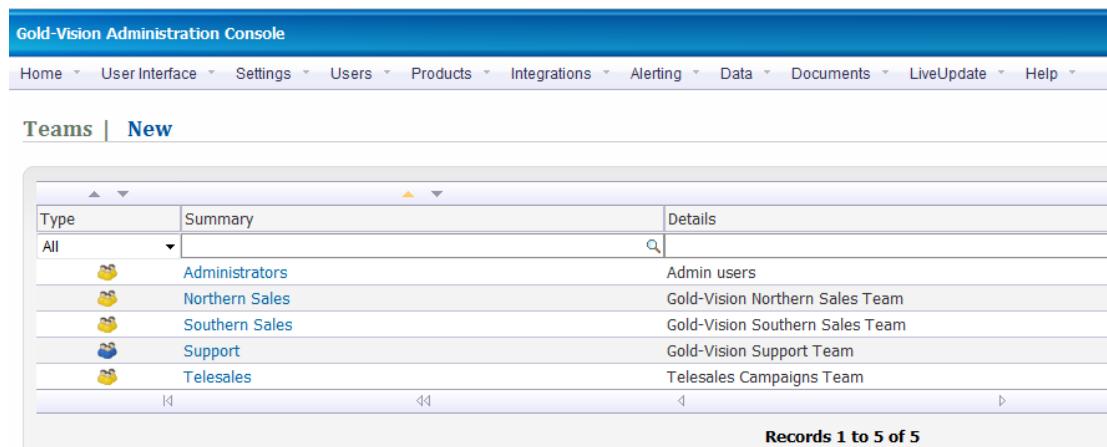

Field(s)	Details	Mandatory
First, Middle & Last Names	The user’s names. The middle name is optional.	Yes
Email	User’s primary email address.	No
Job Title	User’s job title, role or position.	No
Department	Free-type business department.	No
Phone, Mobile	User’s contact telephone numbers(s). These details are useful to set up because they may be used by template documents.	No
NT Account	User’s Windows logon identity in the format ‘Domain\Username’.	Yes
Primary Team	Select the primary team this user belongs to. If this user is a “Mail-Tracker” then do not select a team.	Yes
User Level	Options are: Disabled – no access to Gold-Vision, but this may be useful for including colleagues who are not users but you may wish to show as “owners” of items. Basic User – A normal user with access to Gold-Vision, but without access to the Administration Console. Visibility of items is controlled by the User Access Options screen, see section below. Configuration Manager – This provides access to the configuration options in the Admin Console, but still limits your view of data to your own team access rights. System Administrator – Full administration rights – can see all data, irrespective of any security that may be active on it, and change the rights for all users.	Yes
External ID	This field is used for holding references when integrating with other solutions.	
Simple View Menu	Checkbox to disable multi-level menus.	
Access Preferences	Checkbox to allow a user to change their Homepage Preferences.	
Access Mobile	Checkbox to allow a user to use the Mobile interface – if licences available.	
Show on User List	Checkbox to allow the contact to be included on the user list for ownership of activities, opportunities, projects etc	
Show on AC Managers	Checkbox to allow the contact to be included on the user list for ownership of Accounts.	

Show on Support List	Checkbox to allow the contact to be included on the user list for Support Manager.	
Access Leads	Checkbox to allow users to access Lead Management. The user will also need to be in a Team which has access to Lead Management.	
Mobile Password	Gold-Vision mobile may be accessed using Windows authentication, or using basic authentication. In the later case, a password needs to be created. Leave blank unless notified by support.	
Mail Tracking Details	Mailbox connection string created automatically by entering the Connection type (CDO, Exchange 2007 Web services, IMAP 4 etc), Server details and Username .	Yes
Mail Tracking Folders	“*” to scan all folders and sub folders for this user, or enter specific folders that you want scanned. This is particularly useful for users that receive large volumes of customer data, much of which has no value in a CRM system.	No
Max Sensitivity	Gold-Vision mail tracking will obey Outlook mail sensitivity options – select the level that Gold-Vision shouldn't track (Normal, Personal, Private, Confidential).	
Address Lookup Details	Information on postcode lookup for this user. The exact format of the required information will depend on the postcode lookup software – consult Gold-Vision support for details.	
Scan E-mails	If mail scanning is enabled for this user, scan e-mails, subject to confidentiality rules.	
Scan Appointments	If mail scanning is enabled for this user, scan appointments.	
Scan Contacts	If mail scanning is enabled for this user, scan contacts.	
Scan Tasks	If mail scanning is enabled for this user, scan tasks.	
Disable Mail Scan	Disable all mail scanning for this user. Manual adding of items is still allowed.	
Email Private by Default	For users that want e-mail scanning and attaching to relevant Accounts and Contacts, but where there is a high proportion of business sensitive correspondence. Emails will only be visible to that user (plus full Administrators) but they may “publish” the e-mail by changing its status to public.	
Last Scanned	Last date the user's mailbox was scanned (read-only).	N/A
Phone System & Detail fields	If there is an integrated soft-phone system, select it from the list. The other fields allow you to configure international user defaults, outside line prefixes and other options.	No
Template folder	Optional template folder, leave blank for default (recommended).	No
User Word MailMerge	Use Word MailMerge functionality for running letter campaigns – only select if notified by Support.	No
International Defaults	Choose relevant international options for this user – Date format, numeric format, Default currency (used for displaying local Opportunity values) and time difference (used for adjusting Alerts to user local time).	

Users > View Teams

To view a list of all Gold-Vision teams, select **Users** then **View Teams** from the main menu. To edit a team click on its name, this will open a new window with the team edit screen. To add a new team, please select **New** then **Team** from the main menu.

Important Note: Gold-Vision team membership has two levels. "Primary-membership" represents a user's main team. However, users can be added to multiple teams under what is known as "Secondary Membership". Users can be a member of many teams. The important impact of adding a user to a team (via Primary **or** Secondary membership) is that they will be able to "see" that team's accounts and sub-items under their "team" lists. **For more information on security and teams, please see Appendix A.**

Type	Summary	Details
All	<input type="text"/>	
 Administrators		Admin users
 Northern Sales		Gold-Vision Northern Sales Team
 Southern Sales		Gold-Vision Southern Sales Team
 Support		Gold-Vision Support Team
 Telesales		Telesales Campaigns Team

Records 1 to 5 of 5

The Team Edit Screen – The team edit screen contains two fields: **Summary**, this is the name of the team as it will appear in Gold-Vision. **Details** - optional notes about this team. To add an existing user to the team via "Secondary Membership" click the **Add** button and select the user from the list that appears.

To move a user between teams via "Primary Membership", edit the user from the main **View Users** list, change their **Primary Team** and click **Save**.

Users > Team Memberships

A more visual view of user team memberships can be obtained by selecting **Users** then **Team Memberships** from the menu.

Gold-Vision Administration Console

Home ▾ User Interface ▾ Settings ▾ Users ▾ Products ▾ Integrations ▾ Alerting ▾ Data ▾ Documents ▾ LiveUpdate ▾ Help ▾

Team Memberships

Gold-Vision teams serve two purposes: Firstly they allow for users to be grouped together and secondly they are used for security purposes. When an account security group is set to 'Team' it can only be accessed by the account manager, the account manager's team plus any members/teams which have been given access through the memberships page. By adding a 'Secondary' membership for a user to another team the user will be entitled to access the 'Team' accounts owned by members of that team. For more information on security and teams, please contact support. [View team memberships as a list](#)

Drag and drop users to manage team memberships.

👤 - Primary Membership 🏤 - Secondary Membership 🎉 - Gold-Vision Team 🎉 - Gold-Tracker Team (*) - Team Leader

Administrators	Northern Sales	Southern Sales	Support	Telesales
Andrew Fiendley (*) Gold Admin	Charlie Shaw (*) Sam Bery Simon Lang Steve Hampshire Eddie White X Mark Vernon X	Alison Turney Jiggy Keith John George Nikki Bugla Tim Beresford (*) Usmaan Razaq	Andy Calvert Calum Mackay Eddie White Mark Vernon Russell Jackson Charlie Shaw X Sam Bery X Simon Lang X Usmaan Razaq X	Alison Turney X Charlie Shaw X Nikki Bugla X

👤 - Primary Membership
❏ - Secondary Membership
(*) - Team Leader

Editing / Managing a Team – To edit or manage a team, click on the team name. This appears at the top of each box.

Editing a User – To edit a user, or move their “primary membership” to another team, click on their name.

Adding a Secondary Membership – To add a user to a team using “secondary membership”, click the **(add)** option that appears next to the team name.

Removing a Secondary Membership – To remove or delete a secondary membership, click the delete cross **X** next to the user in the team.

Important Note: The important impact of adding a user to a team (via Primary **or** Secondary membership) is that they will be able to “see” that team’s accounts and sub-items under their “team” lists. **For more information on security and teams, please see Appendix A.**

Team Leaders – This relates to Lead Management, Team Leaders can re-assign leads allocated to the Team. There can be more than one Team Leader per team. Click **View Team Membership as a List** and check the box to make someone a Team Leader.

Northern Sales	Charlie Shaw	ctshaw@esteiro.co.uk	esteiro\ctshaw	✓	<input checked="" type="checkbox"/>	<input type="checkbox"/>

Users > User Access Options

Access to Gold-Vision item types (*Opportunities, Projects, Reports* etc) can be restricted by Primary team using the **Team Access Options** Screen. To open this screen select **Users** then **Team Access Options** from the menu.

It may be that certain users or teams do not require access or edit abilities to item types which are irrelevant to them or access/editability to these types may be restricted for security or business reasons.

The access options screen lists your GV teams down the left hand edge. Next to each team, horizontally, is a list of Gold-Vision item options. To set the access/edit/delete options modify the relevant checkbox and click **Update**. When a user's team does not have access to a particular item type, all icons and menus to that item type will "disappear" from the Gold-Vision user interface.

If a Team has **Access** to an item, they will be able to View the information, but not edit or delete the item.

The **Edit** option grants the team the ability to view the item and change it, but not to delete. **Delete** gives the team full control over the items.

The item types are grouped into two main areas; Gold-Tracker functions and Gold-Vision functions.

You can see the list of teams and the number of members per team.

Using the checkbox you can modify access, edit or delete abilities across Gold-Vision items

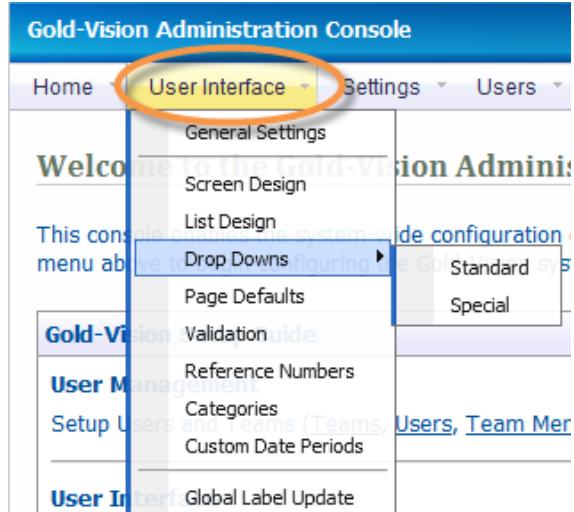

User Access Options

Use this screen to customise Gold-Vision access by Team. You can configure which areas of the product users have access to, including edit and deletion rights. Please note that changing options under the 'Gold-Vision' section may affect your licencing limits. When you are finished, click 'Save' to update the changes.

3: User Interface Configuration (UI)

The Gold-Vision UI can be fully configured to reflect the terminology of your business and how you want to use the product.

- **General Settings** – Choose from system wide User interface options.
- **Screen Design** – Change the layout of screens and configure the names of fields.
- **List Design** – Update the fields that are searchable on list views, configure the default displayed fields and default sort ordering.
- **Drop Downs** – Alternative drop option editor – access relationship dropdowns as well.
- **Page Defaults** – Choose which page Gold-Vision items open on.
- **Validation** – Set de-duplication check options for Accounts and Contacts.
- **Reference Numbers** – Manage reference numbering for the different Gold-Vision items.
- **Categories** – Set the categories for analysis by item.
- **Global Label Update** – Change the 'global' names of the Gold-Vision items (Accounts, Contacts, etc.).

User Interface > Global Label Update

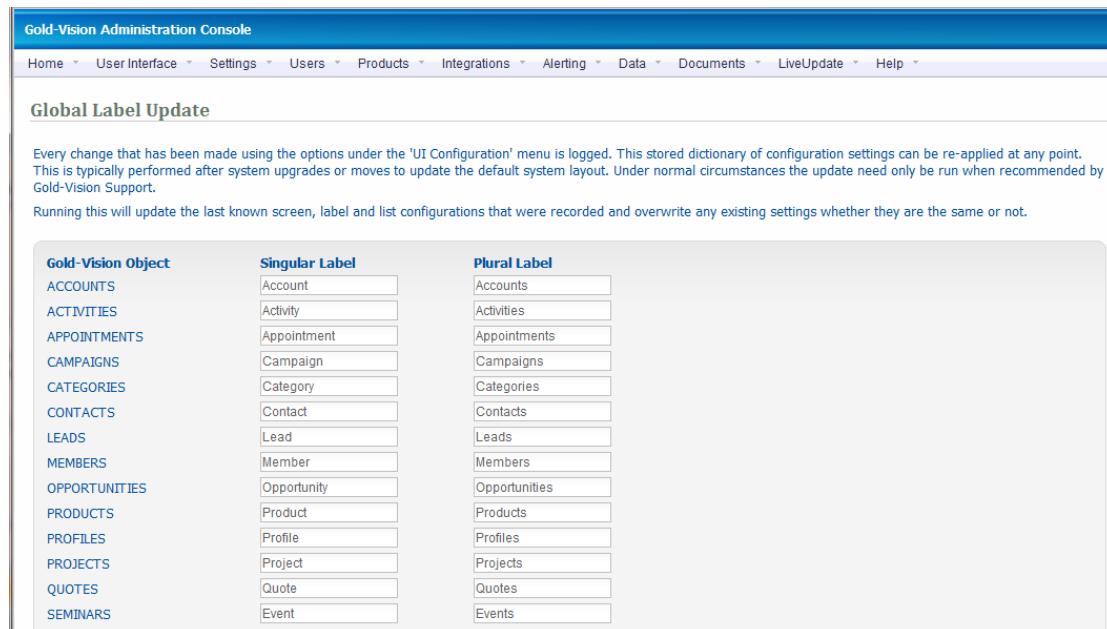

Global Label Update allows the main Gold-Vision items to be renamed. This allows the product to be customised to suit your business terminology.

Each change that has been made using the other options in the **User Interface** menu is stored. This stored dictionary of configuration can be re-applied at any point. This is typically performed after system upgrades or moves to update the default system layout.

Running the **Global Label Update** will update the last known label configurations that were recorded and overwrite any existing labels whether they are the same or not. This will also update the layout of screens.

The **Global Label Update** screen displays the items that can be renamed and can be accessed from the **User Interface** menu followed by Global Label Update.

Make any required changes to the global item names in the Singular Label and Plural Label boxes. To begin the global renaming process, click the Run Update button.

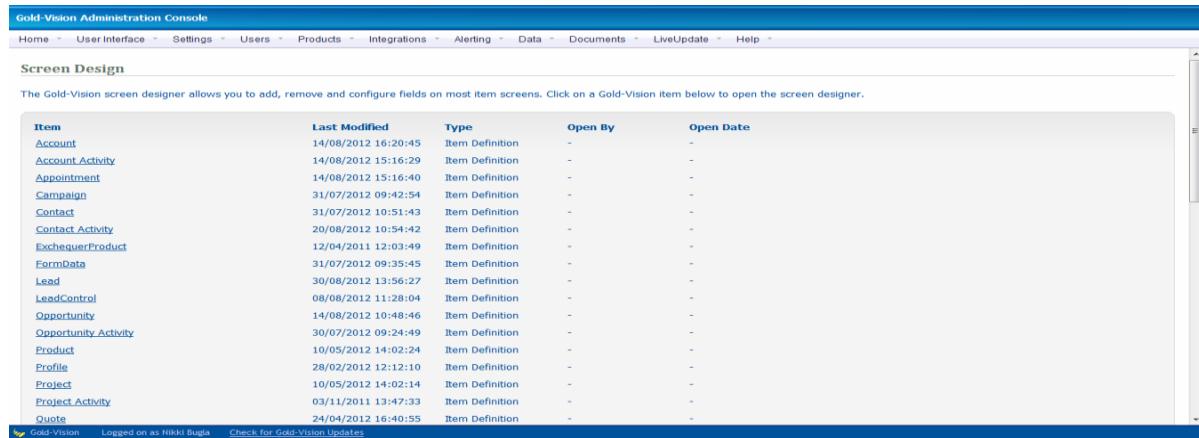

Gold-Vision Object	Singular Label	Plural Label
ACCOUNTS	Account	Accounts
ACTIVITIES	Activity	Activities
APPOINTMENTS	Appointment	Appointments
CAMPAIGNS	Campaign	Campaigns
CATEGORIES	Category	Categories
CONTACTS	Contact	Contacts
LEADS	Lead	Leads
MEMBERS	Member	Members
OPPORTUNITIES	Opportunity	Opportunities
PRODUCTS	Product	Products
PROFILES	Profile	Profiles
PROJECTS	Project	Projects
QUOTES	Quote	Quotes
SEMINARS	Event	Events

Important note: Global renaming is a significant procedure, which will reset and rename a large proportion of screen names and labels throughout the entire product. For this reason it is recommended that global renaming is performed during the early stages of implementation and not on an ad-hoc basis.

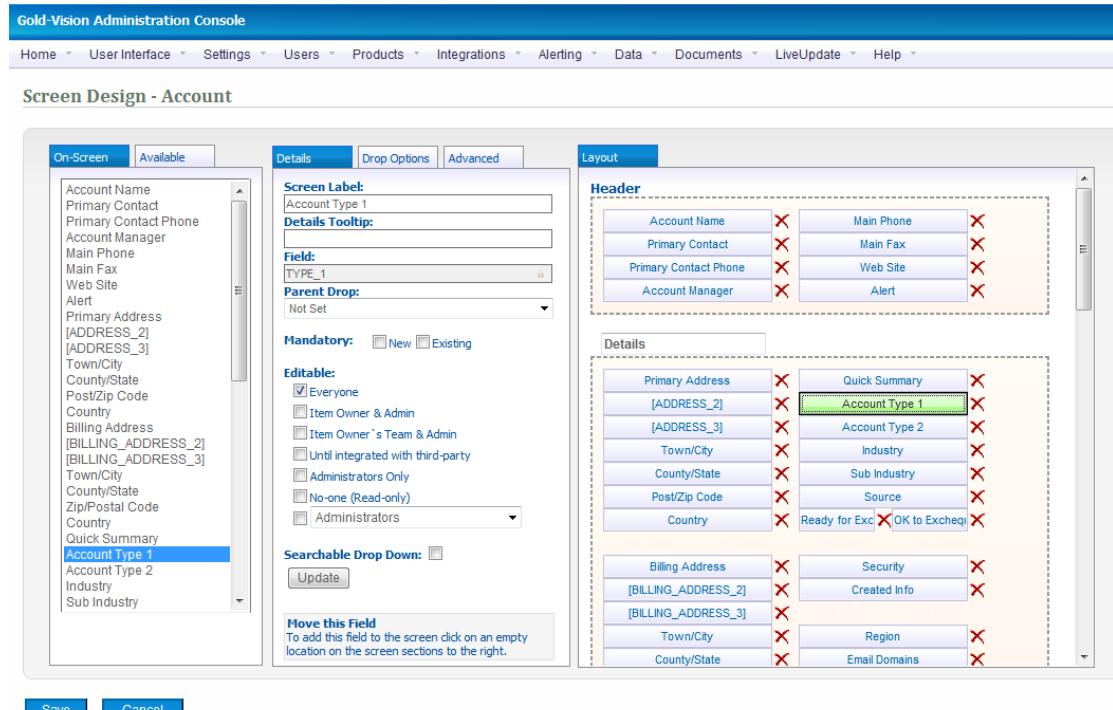

User Interface > Screen Design (Labels and Layouts)

The **Screen Design** allows users to configure the layout of Gold-Vision screens. Selecting the **Screen Design** option from the **User Interface** menu will open a list of the configurable items. The list will display any items that are currently being configured.

Item	Last Modified	Type	Open By	Open Date
Account	14/08/2012 16:20:45	Item Definition	-	-
Account Activity	14/08/2012 15:16:29	Item Definition	-	-
Appointment	14/08/2012 15:16:40	Item Definition	-	-

Quote	24/04/2012 16:40:55	Item Definition	-	-

To design an item, just click its name in the list. The example screen below highlights the layout of the default Account screen within the screen designer. The user defined sections of the screen are visible by scrolling down the screen layout section on the right hand side.

On-Screen (Available list): Account Name, Primary Contact, Primary Contact Phone, Account Manager, Main Phone, Main Fax, Web Site, Alert, Primary Address, [ADDRESS_2], [ADDRESS_3], Town/City, County/State, Post/Zip Code, Country, Billing Address, [BILLING_ADDRESS_2], [BILLING_ADDRESS_3], Town/City, County/State, Zip/Postal Code, Country, Quick Summary, Account Type 1, Account Type 2, Industry, Sub Industry.

Details: Screen Label: Account Type 1, Details Tooltip: (empty), Field: TYPE_1, Parent Drop: Not Set, Mandator: New Existing, Editable: Everyone, Item Owner & Admin, Item Owner's Team & Admin, Unit integrated with third-party, Administrators Only, No-one (Read-only), Administrators, Searchable Drop Down: Update, Move this Field: To add this field to the screen click on an empty location on the screen sections to the right.

Layout: Header section contains Account Name, Primary Contact, Primary Contact Phone, Account Manager, Main Phone, Main Fax, Web Site, Alert. Details section contains Primary Address, [ADDRESS_2], [ADDRESS_3], Town/City, County/State, Post/Zip Code, Country, Quick Summary, Account Type 1, Account Type 2, Industry, Sub Industry, Source, Ready for Exc, OK to Excheq, Billing Address, [BILLING_ADDRESS_2], [BILLING_ADDRESS_3], Town/City, County/State, Security, Created Info, Region, Email Domains.

The different types of fields that can be added to the screen design are highlighted in the table below. There are 10 fields of each data type (except check boxes – 24 available) these can be viewed from the **Available** list on the left hand side.

Account Screen example

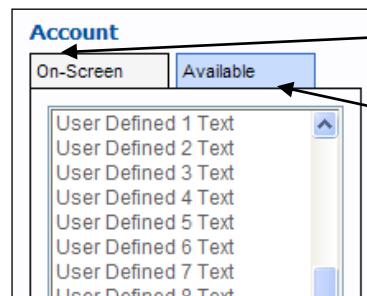

Data Type	Screen default labels	Field Default
Text Field	User Defined 1 Text	AC_UD1
Drop Down Field	User Defined 1 Drop	AC_UD1_ID
Numeric Field	User Defined 1 Numeric	AC_UD1_NUMERIC
Date Field	User Defined 1 Date	AC_UD1_DATE
Check Box	User Defined 1 Check	AC_UD1_BIT

Please note the Field Default will be different depending on the screen being designed. The prefix will determine the item type. E.g. AC = Account, OP = Opportunity.

Making changes using the Screen Design e.g. Account Screen

Adding fields from the Available list

Add additional fields to the screen by clicking on the appropriate field from the **Available** list and clicking on a free space on the screen layout area.

On-Screen - displays a list of fields currently present on the screen

Available - displays additional fields that can be added to the layout by simply clicking on the field and dropping the field in to an empty space on the screen.

Adjusting fields currently on screen

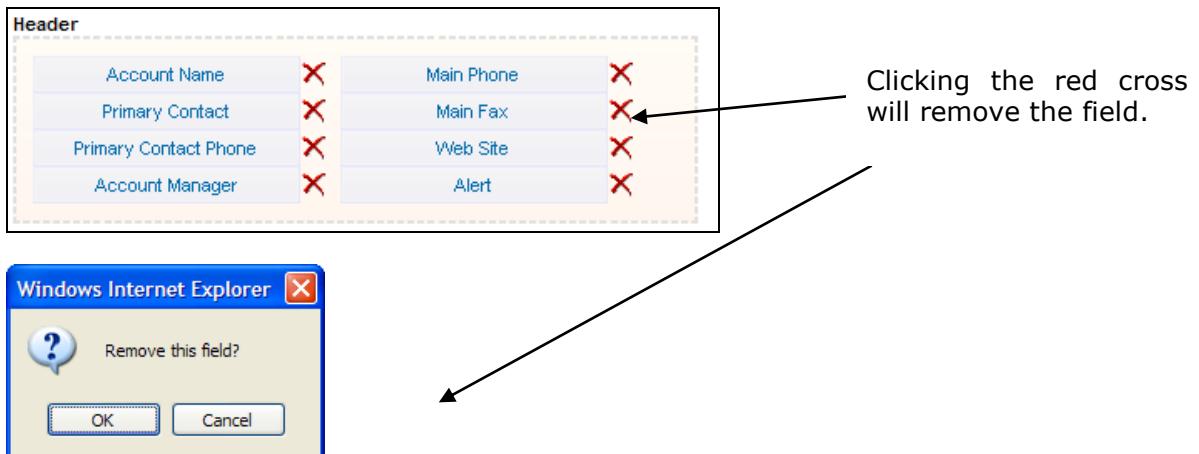

Administrators can select the appropriate field from the **On-screen** list and adjust the field position on the **Screen Layout** using **drag and drop** functionality. Once the displayed field has been selected it will be highlighted in green and can be positioned as required.

The 'Account Name' field is a mandatory field that can not be removed or positioned.

Removing existing fields from Screen layout

To remove an existing field simply click the red cross on the right hand side of each field. This will result in a prompt to confirm the removal.

Configuring fields from the Field Details screen

Field Details: User Defined 1 Text

Details **Advanced**

Screen Label: User Defined 1 Text

Details Tooltip:

Field: AC_UD1

Type: Text box

Mandatory: New Existing

Editable:

- Everyone
- Item Owner & Admin
- Item Owner's Team & Admin
- Until Integrated with 3rd Party System
- Administrators Only
- No-one (Read-only)
- Administrators

Update

Move this Field
To move this field, simply drag and drop it on the screen to a new empty location.

By clicking on a field positioned on the screen details about the item will be displayed in the **Field Details** section.

Screen Label – users can configure the name of the field.

Details Tooltip – shows details of what the field represents, this text will be seen when you hover over the field on the live screen.

Field – the default label of the file within the SQL database (non-editable).

Type – type of field e.g. Text box, Drop Down, Date, Check box and Number.

Mandatory – set the field to be mandatory for new or existing items, available for all field types.

Editable – set permissions for editing fields, available for all field types.

Field Details: User Defined 1 Text

Details **Advanced**

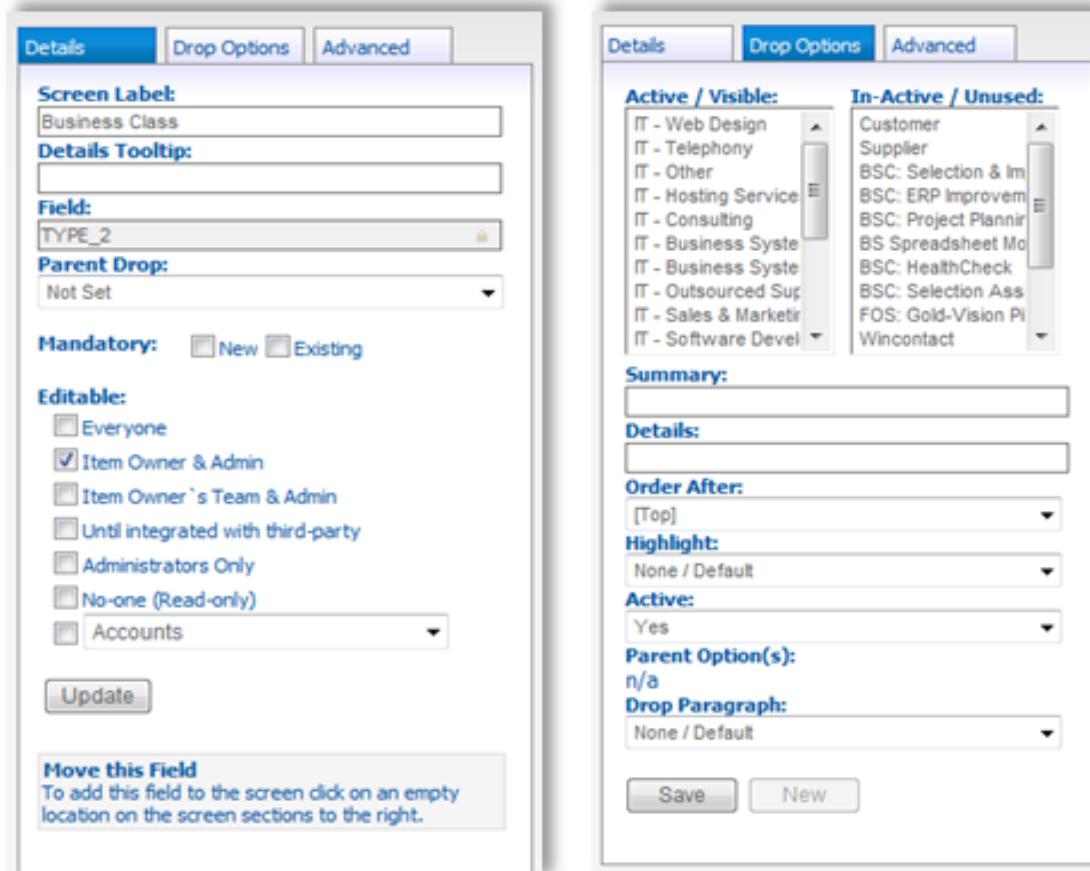

Width: Standard **Set**

Icon: None **Set**

Advanced options allow users to configure the size of the width of each field.

Configuring Drop Downs

In addition to the existing text field options, Drop down fields allows users to set the drop options for that field, as well as being able to define parent dropdowns (i.e. where the drop options in this field are dependent on drop selections made from the parent dropdown).

Details

Screen Label: Business Class

Details Tooltip:

Field: TYPE_2

Parent Drop: Not Set

Mandatory: New Existing

Editable:

- Everyone
- Item Owner & Admin
- Item Owner's Team & Admin
- Until integrated with third-party
- Administrators Only
- No-one (Read-only)
- Accounts

Update

Move this Field
To add this field to the screen click on an empty location on the screen sections to the right.

Details

Active / Visible:

- IT - Web Design
- IT - Telephony
- IT - Other
- IT - Hosting Service
- IT - Consulting
- IT - Business System
- IT - Business System
- IT - Outsourced Sup
- IT - Sales & Marketir
- IT - Software Devel

In-Active / Unused:

- Customer
- Supplier
- BSC: Selection & Im
- BSC: ERP Improvem
- BSC: Project Plannir
- BS Spreadsheet Mo
- BSC: HealthCheck
- BSC: Selection Ass
- FOS: Gold-Vision PI
- Wincontact

Summary:

Details:

Order After: [Top]

Highlight: None / Default

Active: Yes

Parent Option(s): n/a

Drop Paragraph: None / Default

Save **New**

Details – as per the text field – however note the Parent Drop option. A user may select other dropdown fields in this area to then create a dependency for example,

Dropdown 1:	Product A	Dropdown 2	Option 1
		Dropdown 2	Option 2
		Dropdown 2	Option 3
	Product B	Dropdown 2	Option 4
		Dropdown 2	Option 5
		Dropdown 2	Option 6

Summary – name of the drop option.

Details – Allows users to record what the field represents. Note this will not be displayed on the live system.

Order After – Set the order the drop options appear.

Highlight – set a colour for the drop option from the wide range of available colours.

Active - if set to yes the dropdown will be visible from the dropdown list. The current status can be viewed from the Active and In-Active boxes.

Parent Option(s) – if the drop down field has been assigned a Parent dropdown, then for each dropdown, indicate which Parent option would make this option valid. In the example above, if we were setting the dropdown “Option 5” in Dropdown 2, then this field would be set as “Product B”.

Drop Paragraph(s) – (see also documents section). Gold-Vision allows you to construct template documents using paragraphs that link to dropdown options. For example, you may have an introductory letter template document that you change depending on, say the industry of the recipient. You may construct the relevant paragraphs that are relevant for the different industries, and then Gold-Vision will insert the relevant paragraph into the document based on the industry dropdown if they have been linked.

Click the **Add** button to confirm additional drop option. *Note the dropdown selection will not be removed from existing records with this option selected.*

Configuring Numeric Fields

Field Details: User Defined 1 Numeric

Details	Advanced
Screen Label: User Defined 1 Numeric	
Details Tooltip:	
Field: AC_UD1_NUMERIC	
Type: Number <input type="button" value="Convert to Integer"/>	
Mandatory: <input type="checkbox"/> New <input type="checkbox"/> Existing	

For Numeric fields users can convert to an integer by simply clicking on the option .

Convert to Integer

And convert back to a decimal by clicking on the option to revert back to a decimal.

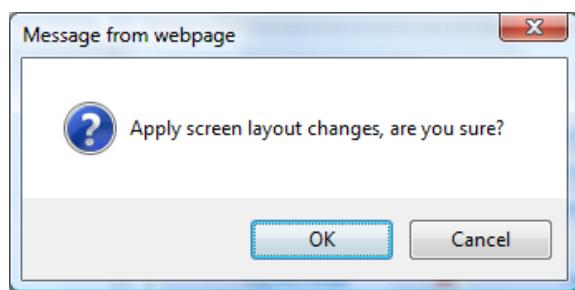

Convert to Decimal

The **Update** button must be pressed whenever to save field changes back to the database.

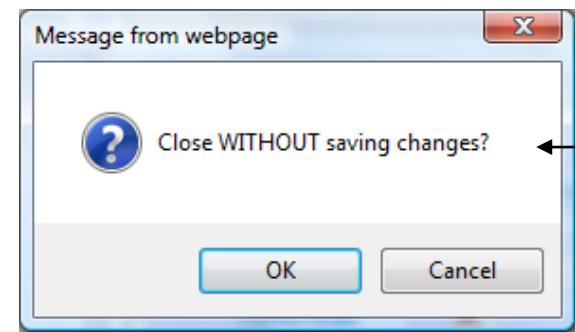

Applying changes to screens

Update

Changes to screens will only be registered if the **Save** option is selected from the bottom of the Screen Design highlighted below.

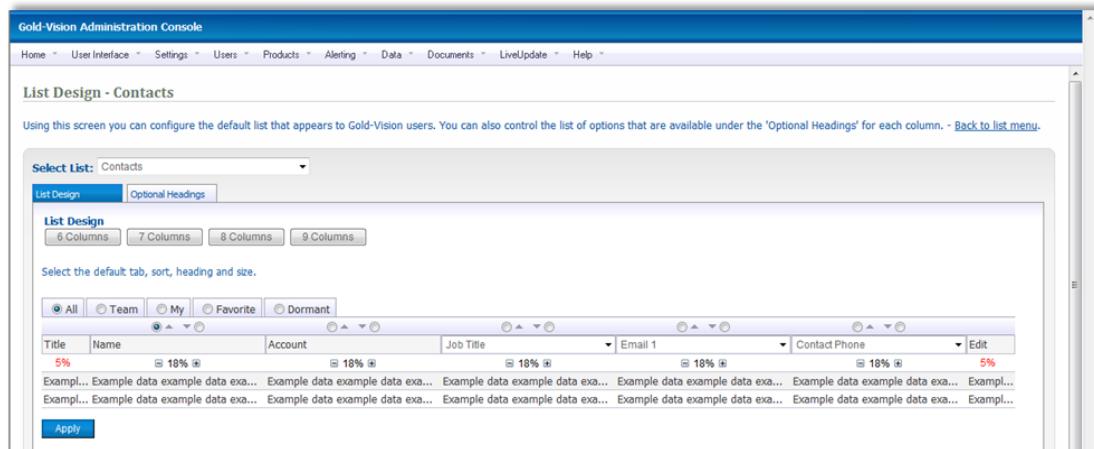

The **Save** prompt will allow you to save your layout changes.

Clicking **Close** will close the screen designer without saving any changes - a prompt will be displayed to confirm.

User Interface > List Design (Columns and Headings)

The List Design allows you to configure the items that will be displayed within a list view of Gold-Vision information, plus the default columns selected and list sort order. An additional column can be added to some lists to provide additional searching space. The screenshot below shows an example of a configuration screen for Accounts. To open the list design screen select **User Interface** then **List Design** from the menu, then select a Gold-Vision item type. The following screen will appear – this is Contacts:

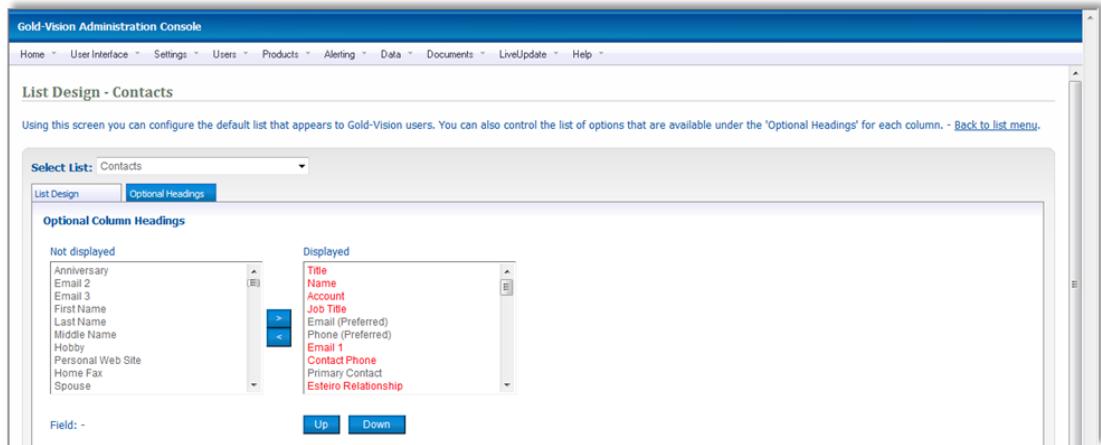

Gold-Vision List: Use this dropdown to select which of the lists you want to configure. The options here are the main list (e.g. Account), the Home Page list (as seen when a user has this list on their homepage) and Mobile (the list as seen on Gold-Vision Mobile). Each of these can be configured separately as required.

List Design (Default Columns): Select the number of columns you want to see in the list (5-8 are available on most lists). You can then select the default columns to be displayed when you open this list. The selection can be from any of the fields currently available in the Displayed list.

Default Sort Order: Define the default sort order for the list and the direction to sort. The list can be sorted by a field not selected as one of the default columns if required.

Default List: Select the default list to display, from either All, Team, My, Favourites or Dormant (the latter only for Accounts and Contacts).

Column Widths: Click on the – or + buttons to increase or decrease the relative widths of the columns on this list.

Optional Column Headings: Shows which fields are available for selection and searching on in this list. You have two lists – **Displayed** and **Not Displayed**.

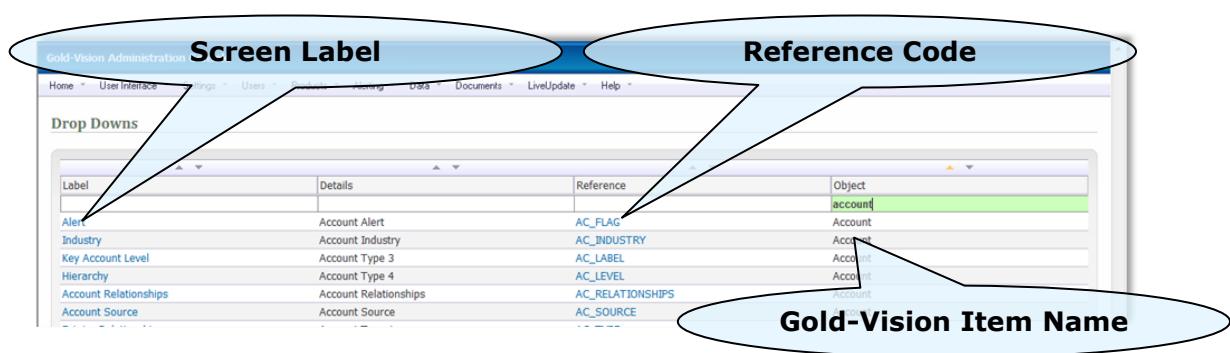

The items highlighted in red are the default fields that will be displayed when viewing information in a list view. These will be as selected above.

Update the items between the **Not displayed** and **Displayed** lists by selecting an item and clicking either the **Add Selected** or **Remove** buttons. The item will move across to the other list. In the **Displayed** list, items can be arranged to appear in a specific order. To move an item up or down the list, select it and click the **Up** or **Down** button as appropriate. If the item needs to be moved more than one place, just click the move button again.

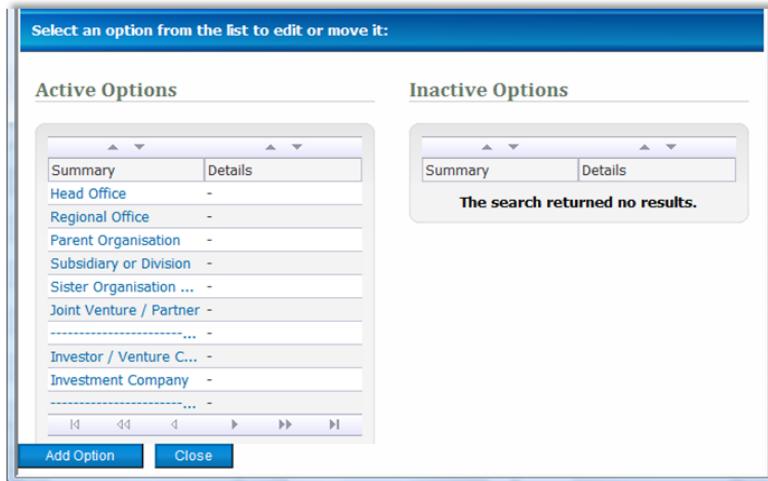

User Interface > Drop Downs

This functionality duplicates the functionality available from within the screen designer, but is useful when making changes to a number of dropdown options at once, or where you want to edit Link Relationship dropdowns which are not displayed on screens.

To configure drop down items, select **User Interface** then **Drop Downs** from the menu. The **Drop Downs** section opens a list of all of the dropdown menus in Gold-Vision, similar to that shown below. The list shows the screen label of the field, its reference, the details and the item it belongs to. To edit a particular dropdown menu, click its name in the list.

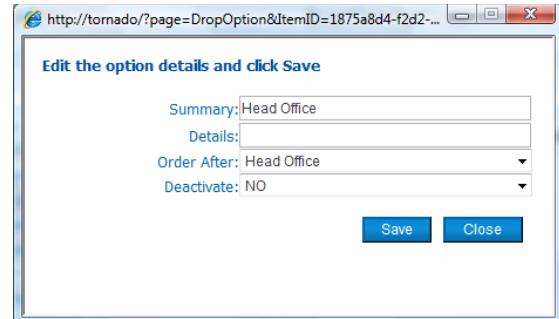

A screen similar to that below will open. In this example the window shows the Account Relationship dropdown options.

The options that are currently available in the dropdown menu are shown on the left, under **Active Options**. Any options that are not currently being used in the dropdown menu are held under the **InActive Options**. These options are known as 'Deactivated' options.

To edit an option, simply click the Summary name. A new window will open (shown below) and the details can be edited as required. The Summary and Details of the dropdown option can be changed, and the option can be Deactivated or made active. Once any changes have been made, click **Save** to save the details.

The order of the items in a dropdown list can be defined using the 'Order After' option. To set the position of an item in a list, select the item that you want the open item to be placed after and save the item.

To add a new option to the dropdown menu, click the **Add Option** button and enter details into the fields of the New Option window. Click the **Save** button to store the information.

Special Drop Downs: There are 3 drop down fields that have hard coded functionality built into the system, and are edited in a different manner. These are probability, Account discount and Lead Management status/outcomes fields.

Special Drop Downs

A few of Gold-Vision's drop down fields contain special or restricted values. These can be configured below.

Opportunity Probability 0~100. Integers only. One per line	<div style="border: 1px solid #ccc; padding: 5px; height: 150px; overflow-y: scroll;"> 0 10 20 30 40 50 60 70 </div>
Account Discount 0~100. Numbers only. One per line	<div style="border: 1px solid #ccc; padding: 5px; height: 150px; overflow-y: scroll;"> 0 5 10 30 40 50 60 70 </div>
Lead Status/Outcomes One per line	<div style="border: 1px solid #ccc; padding: 5px; height: 150px; overflow-y: scroll;"> No Answer Invalid Number Do Not Contact Wrong Contact Call Back Not Interested Call 1 Call 2 </div>

User Interface > Page Defaults

Administrators can choose on a system wide basis which pages(screens) open as a default for each item area. Click **Save** to save the changes.

Gold-Vision Administration Console

Home ▾ User Interface ▾ Settings ▾ Users ▾ Products ▾ Alerting ▾ Data ▾ Documents ▾ LiveUpdate ▾ Help ▾

Page Defaults

Using this screen you can configure which page is displayed by default when a user opens a Gold-Vision item.

Account Default Page Contact Default Page Opportunity Default Page Quote Default Page Profile Default Page Project Default Page Event Default Page	<div style="border: 1px solid #ccc; padding: 5px; height: 150px; overflow-y: scroll;"> Overview Business Details Details Details Details Details Userdefined Userdefined2 Userdefined3 Sessionlist1 Bookings Sessionbookingsplanner Sessionbookingslist Links </div>
--	--

User Interface > Validation

Administrators can choose options for validation checking with **New / Insert** (will check when new item created) validation, and/or **Update** validation (will check every time the record is edited and saved).

Gold-Vision Administration Console

Home ▾ User Interface ▾ Settings ▾ Users ▾ Products ▾ Alerting ▾ Data ▾ Documents ▾ LiveUpdate ▾ Help ▾

Validation

You can configure item de-duplication validation using this screen. Select how you would like Gold-Vision to identify potential duplicates below and click 'save'.

Account Insert Validation Account Update Validation Contact Insert Validation Contact Update Validation	<div style="border: 1px solid #ccc; padding: 5px; height: 150px; overflow-y: scroll;"> De-duplicate using name or phone or website None De-duplicate using name and email address None </div>
--	---

User Interface > Automatic Reference Numbers

All items can be set up have reference numbers attributed to them on creation. A number of different 'tags' are available – these can be used in combination to create the reference number required.

Gold-Vision Administration Console

Home User Interface Settings Users Products Alerting Data Documents LiveUpdate Help

Reference Numbers

Use this screen to configure automatic reference numbers for Gold-Vision items. Each item type supports an independent 'expression', made up of tags, that defines how the automatic reference is formatted. Use the table below to define these expressions by item type. There is a list of available 'tags' below plus a few 'examples'.

Item Type	Reference Number Expression	Auto #	Digits	Enabled	Optional	Add to Summary	Apply
Accounts	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Activities (Account)	{#}	1	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Activities (Contact)	{#}	6153	4	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Activities (Opportunity)	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Activities (Project)	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Campaigns	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Contacts	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Event Attendees	{#SEM}/{#BOOK}/{#ATT}	0	6	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Event Bookings	{#}	1122	6	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Events	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Opportunities	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Profiles	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Projects	{#}	0	6	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply
Quotes	{#OP}-{#QUO}-{AC:5}	1291	4	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Apply

Reference Number Tags

- {#} - Auto number (based upon auto # +1)
- {AC:n} - First 'n' characters of Account name (1~5)*
- {US} - User initials
- {TM} - Team initials
- {D} - Day (2-digit number)
- {DAY} - Day name (first 3 characters)
- {DOY} - Day of Year (3-digit number)
- {M} - Month (2-digit number)
- {MON} - Month name (first 3 characters)
- {YY} - Year (2-digit number, excluding century)
- {YY} - Year (4-digit number, including century)
- {H} - Hour (2-digit number, 24 hour clock)
- {I} - Minute (2-digit number)
- {S} - Second (2-digit number)
- {#AC} - Auto number from the parent Account*
- {#ACT} - For Activities to all use the same seed*
- {#OP} - Number of Opportunities in a given Account - Useful for sales or invoice numbers*
- {#QUO} - Number of Quotes in a given Opportunity - Useful for sales or invoice numbers*
- {#SEM} - Copies the Event ref number - Useful for booking or attendee references (only)*
- {#BOOK} - Copies the Event Booking ref number - Useful for attendee references (only)*
- {#ATT} - Number of Attendees in the current Booking - *

* - Only available for certain item types.

Reference Number Examples

- ABC/{#}-{AC:3} would produce **ABC/1001-EXA** for auto # 1000 and Account name 'Example Company'.
- {AC:5}-{#OP}-{#QUO} would produce **Examp-1-2** for the second quote in the first opportunity for 'Example Company'.
- {US}:{#} would produce **JS:005443** for auto # 5442 (6-digits) and User name 'John Smith'.
- XYZ/{Y}{M}{D} would produce **XYZ/081203** for 3rd December 2008.
- {D}{MON}{YY}-{DOY}-{#} would produce **03FEB2008-034-000321** for 4th February 2008, auto # 320 (6 digits).

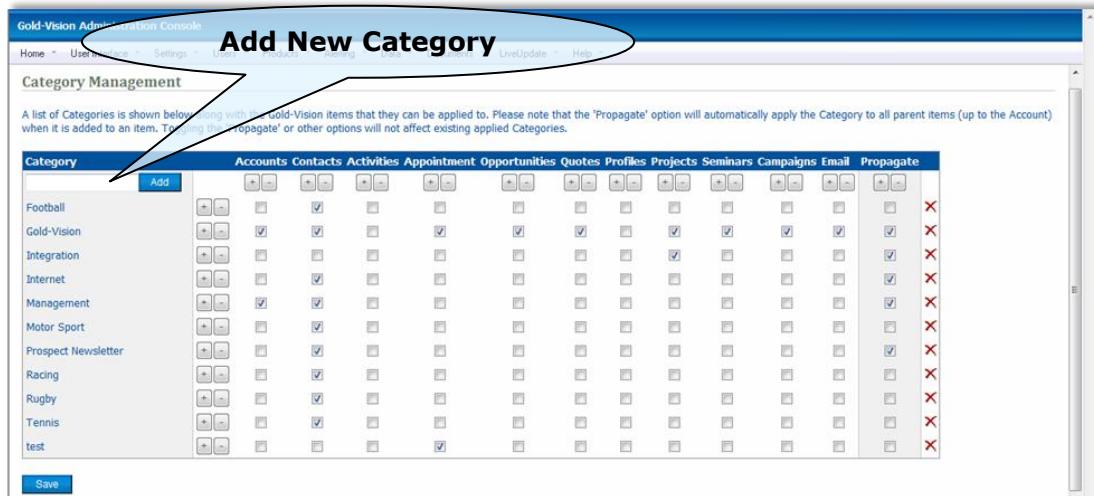

For each item type, define a Reference Expression using the different tags, set the number to begin at in the **Auto #** column – the next item created will take the next number in sequence after the entered value.

The **Digits** field selects the number of digits to enter into the item (this applies to number fields only) – leading zeroes will be entered where relevant (i.e. if the starting number is 100 and 5 digits are set, the first number will be 00101).

Select **New Items** if you want the reference number applied, select **Optional** if you want a prompt to add a reference number or not and select **Add to Summary** to prefix the summary of the new item with the reference number. Click **Apply** to put any changes into place.

User Interface > Categories

Categories are ideal for the searching and analysis of Gold-Vision items. They may be assigned to different item areas in Gold-Vision so that users do not see irrelevant category options. Furthermore, they can synchronise with Outlook Categories that match the Gold-Vision Categories. This allows field based users, for example to write notes and categorise their off-line Outlook appointment records for synchronisation back into Gold-Vision for reporting.

The screenshot shows the 'Add New Category' screen in the Gold-Vision Administration Console. At the top, there is a navigation bar with links for Home, User Interface, Settings, and Help. Below the navigation bar, a section titled 'Category Management' contains a note: 'A list of Categories is shown below along with the Gold-Vision items that they can be applied to. Please note that the 'Propagate' option will automatically apply the Category to all parent items (up to the Account) when it is added to an item. Toggling the 'Propagate' or other options will not affect existing applied Categories.' The main area is a grid table with columns for Category, Accounts, Contacts, Activities, Appointment, Opportunities, Quotes, Profiles, Projects, Seminars, Campaigns, Email, and Propagate. The 'Category' column has an 'Add' button. The 'Propagate' column has a red 'X' icon. The 'Category Management' section has a red arrow pointing to it. A blue arrow points to the 'Add' button in the 'Category' column.

Adding a Category: Type a new category description into the category add field. Click on the **Add** button. The category will appear in the category list below.

To add the category to *all* item areas, click on the + icon to the left of the item columns.

To remove the category from *all* item areas, click on the - icon to the left of the item columns.

To add *all* categories to *individual* item areas, click on the + icon in the item columns.

To remove *all* categories to *individual* item areas, click on the - icon in the item columns.

To add or remove the category to *individual* item areas, click on the relevant checkboxes.

User Interface > General Settings

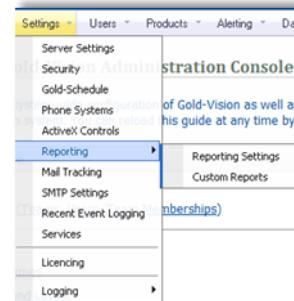

There are several user interface settings, most are self-explanatory. Items requiring further explanation are below.

Note editing – three options available. **No Note Editing** – Notes cannot be edited; **Recent notes only, by creator** – Editing allowed by the Note creator up to 24 hours after creation; **Editing allowed by Creator** – Notes can always be edited by the creator.

List Bulk Edit – bulk edit allows user to update items en-masse – select whether this option is available for normal users or system admins and which lists users can bulk edit.

4. Settings

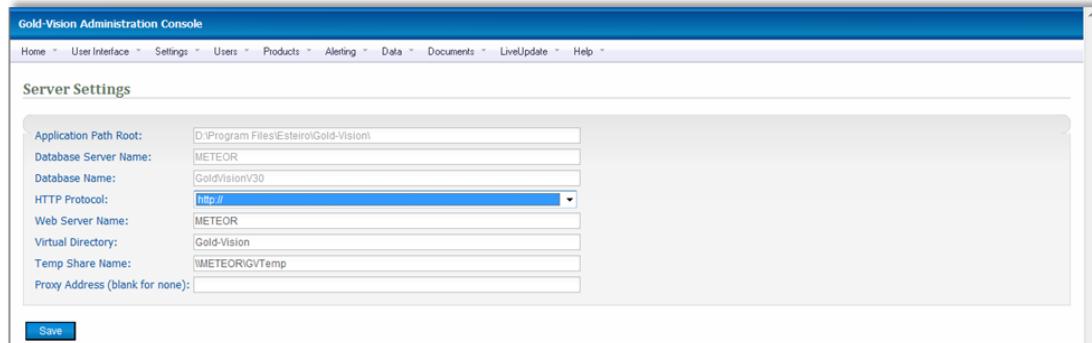

Gold-Vision settings can be managed directly from the Administration Console, under the **Settings** menu.

- **Server Settings** – General global Gold-Vision settings.
- **Security** – Manage the Gold-Vision security settings.
- **Gold-Schedule Settings** – Manage Gold-Schedule events, e.g. back up Gold-Vision.
- **Phone Systems** – Manage Phone controls
- **ActiveX Controls** – Review ActiveX controls and versions in use.
- **Reporting** – Reporting Settings and interface for adding custom reports
- **Mail Tracking** – Manage the schedules and settings for mail tracking
- **SMTP Settings** – Configure links to an SMTP server which Gold-Vision uses to send emails.
- **Recent Event Logging** – Choose which items you want Gold-Vision to log as Recent Events.
- **Services** – Stop and Start the relevant Gold-Vision Server Services without having to work on the server.
- **Licencing** – Apply and manage Gold-Vision user Licences.
- **Logs** – All Gold-Vision system logs.

Settings > Server Settings

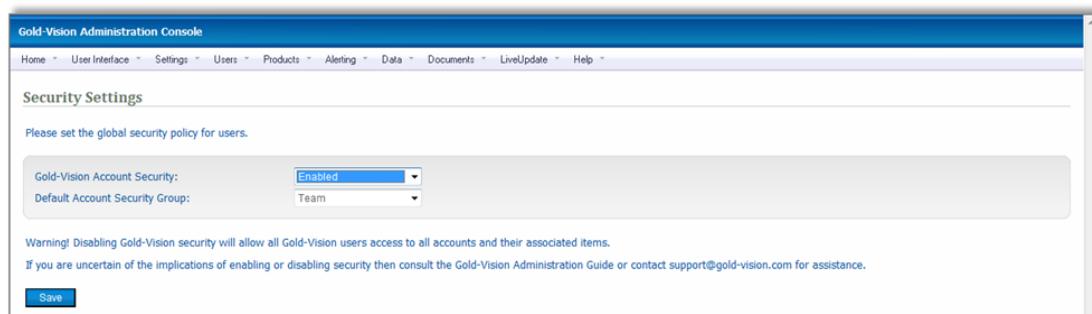

Select **Settings** then **Server Settings** from the. The **Global Settings** option allows you to set different options for the general running of Gold-Vision.

Setting	Notes
Server Settings	
Application Path Root	Application folder on the local machine
Database Server Name	Database server name or instance name
Database Name	SQL database name
HTTP Protocol	Either http:// or https://
Web Server Name	NetBios Name of the local machine
Virtual Directory	Main Gold-Vision virtual directory name
Temp Share Name	UNC share of the Gold-Vision Tmp folder
Proxy Address	Proxy server IP Address/Name and Port

Settings > Security

Security in **Gold-Vision** is optional and can be activated or deactivated using this screen. The restrictions on access to **Gold-Vision** Accounts and associated items are different for each security status.

Important Note: If unsure about the impact of making security changes please contact Gold-Vision support beforehand. Security changes take immediate effect. **For more information on security and teams, please see Appendix A.**

Security Disabled

If the security is disabled the only restrictions that apply are:

1. On the Gold-Vision Administration Console itself – a user must have the “Access admin console” flag set to be able to access the Gold-Vision Administration Console.
2. Users cannot access the product (via the home page) or access any Accounts, unless they are a registered user of **Gold-Vision**.

Therefore, when security is disabled, ***all users can see all accounts***.

Security Enabled

If security has been enabled, access to accounts and their child objects is restricted. The approach of the security model is twofold:

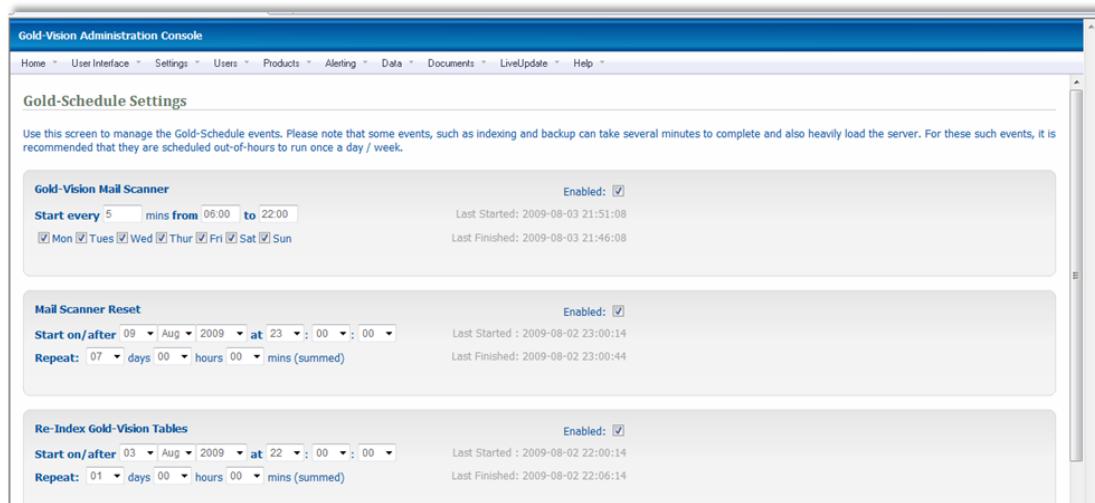

1. Accounts are assigned to one of three ‘account groups’. These groups are **Public**, **Private** and **Team**. The selection of account group is done when creating an Account, or by editing an Account and selecting the relevant security level from the ‘Security’ dropdown menu on the details screen
 - a. **Public** – All users can see this account and sub items.
 - b. **Team** – Only users or team members of the account can see this account and sub items.
 - c. **Private** – Only the Account Manager can see this account and sub items.
2. Individual users are included as members of specific items within Gold-Vision. Any number of users or teams can be added to any given item. Users and teams can only be added and removed by users who have access to the account already.

Default Level

The default level can be set to Public, Team or Private. This setting reflects the default-selected security level when new accounts are created.

Settings > Gold-Schedule Settings (Mail Tracking / Exchange Integration)

Use this screen to manage the **Gold-Schedule events**. Events can be enabled or disabled and their timeframe and frequency adjusted.

Gold-Schedule Settings

Use this screen to manage the Gold-Schedule events. Please note that some events, such as indexing and backup can take several minutes to complete and also heavily load the server. For these such events, it is recommended that they are scheduled out-of-hours to run once a day / week.

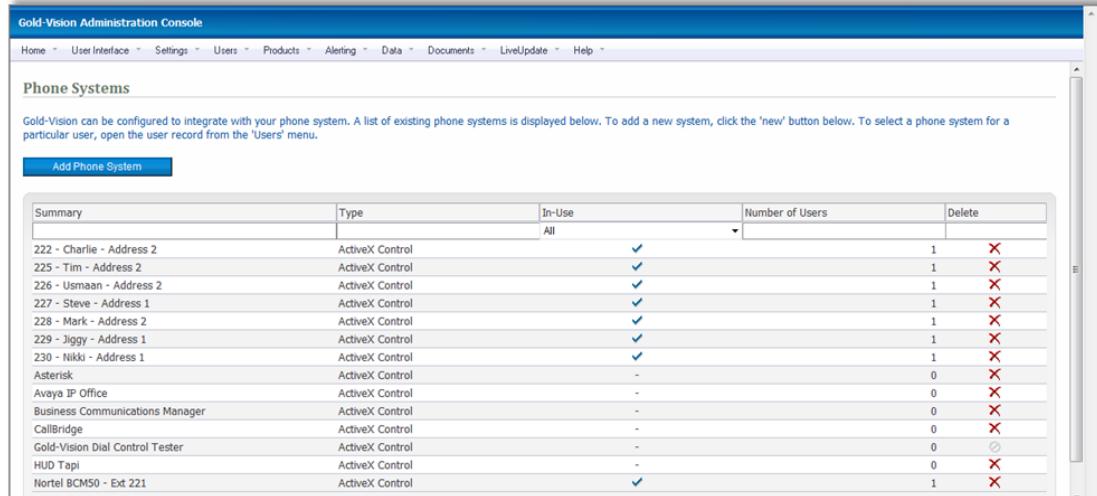

Event	Enabled	Last Started	Last Finished
Gold-Vision Mail Scanner	<input checked="" type="checkbox"/>	2009-08-03 21:51:08	2009-08-03 21:46:08
Mail Scanner Reset	<input checked="" type="checkbox"/>	2009-08-02 23:00:14	2009-08-02 23:00:44
Re-Index Gold-Vision Tables	<input checked="" type="checkbox"/>	2009-08-02 22:00:14	2009-08-02 22:06:14

Please note that some events, such as **Re-Indexing** and **Mail Scanner Reset** can take several minutes to complete and also heavily load the server. For these events, it is recommended that they are scheduled to run (out-of-hours) once a day / week.

Settings > Phone System (Integration)

Gold-Vision is compatible with any TAPI phone system. The Phones option provides an easy way to configure Gold-Vision to work with your phone system (especially if it is not on our default TAPI phone system list).

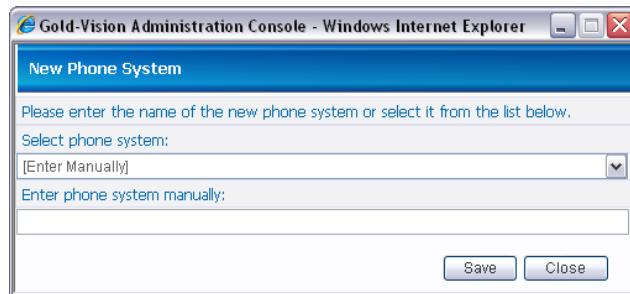

To use the Phone configuration your TAPI phone should be connected to the client machine you are accessing Gold-Vision with.

Summary	Type	In-Use	Number of Users	Delete
222 - Charlie - Address 2	ActiveX Control	✓	1	X
225 - Tim - Address 2	ActiveX Control	✓	1	X
226 - Usmaan - Address 2	ActiveX Control	✓	1	X
227 - Steve - Address 1	ActiveX Control	✓	1	X
228 - Mark - Address 2	ActiveX Control	✓	1	X
229 - Jiggy - Address 1	ActiveX Control	✓	1	X
230 - Nikki - Address 1	ActiveX Control	✓	1	X
Asterisk	ActiveX Control	-	0	X
Avaya IP Office	ActiveX Control	-	0	X
Business Communications Manager	ActiveX Control	-	0	X
CellBridge	ActiveX Control	-	0	X
Gold-Vision Dial Control Tester	ActiveX Control	-	0	○
HUD Tapi	ActiveX Control	-	0	X
Nortel BCM50 - Ext 221	ActiveX Control	✓	1	X

To **Add a new Phone System**, click on **Add Phone System**.

The New Phone System window will open. You can then either select from the phone systems currently installed on your machine (these will be detected automatically by Gold-Vision) or you can enter the name of the phone system manually.

New Phone System

Please enter the name of the new phone system or select it from the list below.

Select phone system:

[Enter Manually]

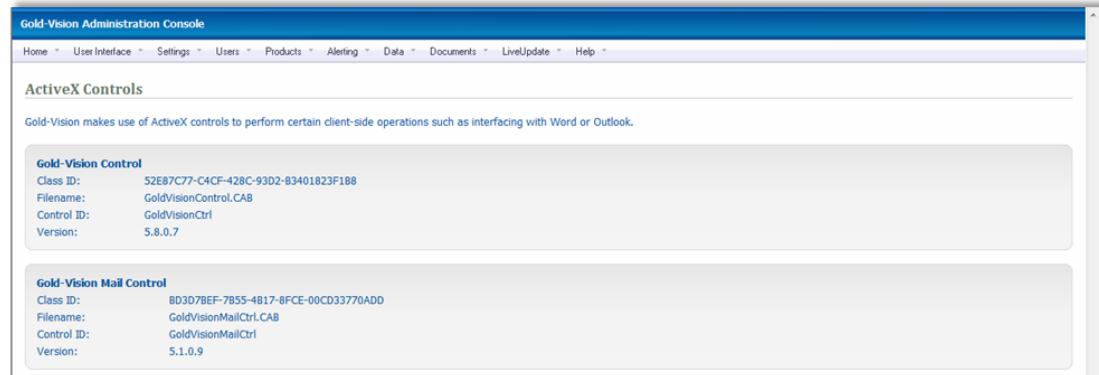

Enter phone system manually:

If you choose to enter the name of the phone system manually, you must enter the correct TAPI provider name (this is as displayed under **Providers** under Windows **Control Panel > Phone and Modem options > Advanced**). The manual option can be used to configure the phone system if the Gold-Vision control is not present, or if you are configuring phone systems for use by other users.

Once a phone system is configured, it is then available for users to select from their User Preferences. You can view all the available systems from this page.

Settings > ActiveX Controls

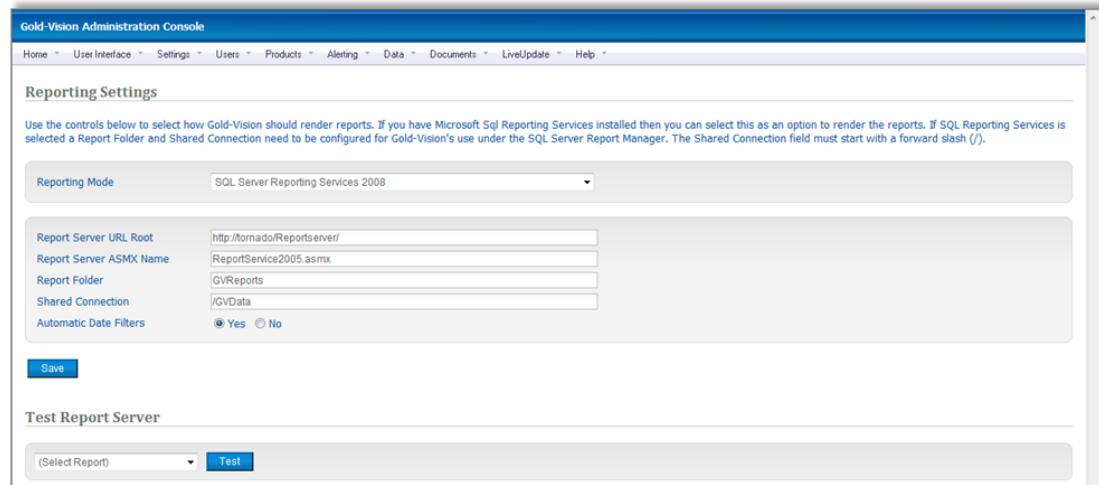

This screen provides the details of ActiveX controls in use.

Settings > Reporting (SQL Reporting Services)

Report Settings

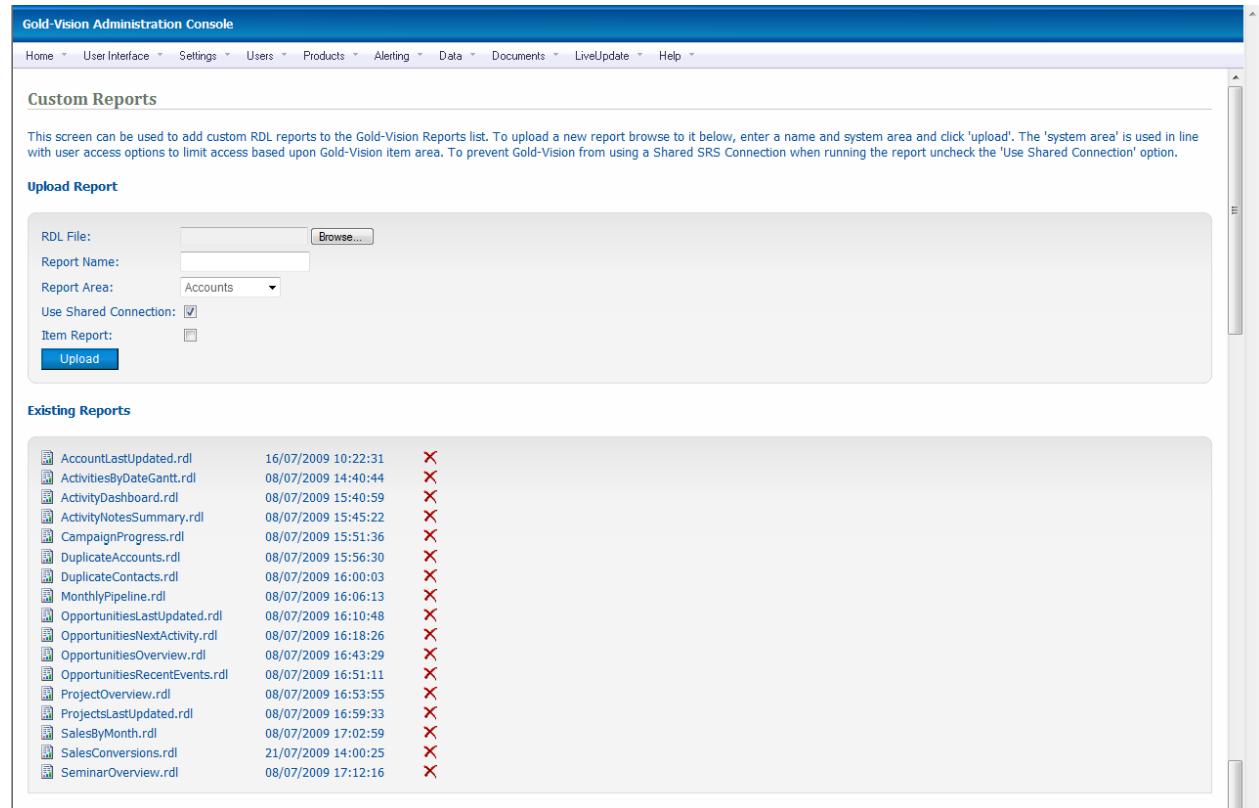

Enter the server report settings in this screen. Please see the Technical Document for detailed information on setting up SQL Reporting Services.

Reporting Mode	Select either Native, SQL reporting services 2000/2005 or SQL Reporting Services 2008
Report Server URL Root	If using SRS, this should be the base url of the reporting server
Report Server ASMX Name	This should be set to ReportService.asmx
Report Folder (on Report Server)	Name of the Gold-Vision reports folder
Reporting Shared Connection	Reports shared connection path
Automatic Date filters	This inserts start and end date filters for all reports.

Custom Reports

Custom reporting files may be created using the SQL Reporting Services Designer tool, or may be created by your reporting specialists, or by Gold-Vision support. They may be added to the Gold-Vision user interface using the following options.

Custom Reports

This screen can be used to add custom RDL reports to the Gold-Vision Reports list. To upload a new report browse to it below, enter a name and system area and click 'upload'. The 'system area' is used in line with user access options to limit access based upon Gold-Vision item area. To prevent Gold-Vision from using a Shared SRS Connection when running the report uncheck the 'Use Shared Connection' option.

Upload Report

Settings > Mail Tracking

This screen provides the details of the main Mail tracking options.

The settings below are global controls for the mail-tracking process. In addition to these settings mail tracking integration must be configured per-user under the 'Users' section.

Apply MailScan Reset: [Select a date]

Email Scan Exclusions: `jane@mrbig@aol.com`
Example: `@adomain.com, @adomain.co.uk, jim@anotherdomain.co.uk`

Internal Email Domains: `esteiro.co.uk.gold-vision.com,rsteiro.co.uk`
Example: `mymaildomain.com,mycompanydomain.co.uk`

Mail forms information: `Example: mydomain\inboxbox=infoform,mydomain\enquirybox=enquiryform`

Store Attachments: In the database Externally as files
Open Attachments: Through browser (HTTP) Using temp share (UNC)

Internal mail tracking option: Never
Matching mask: `(Regular Expression defining email subjects to scan) Example: [\d]{4}:`
Post-Scan Procedure: `(Stored Procedure to run after each mail scan)`

Apply MailScan Reset:	To force the mail scanner to scan back to a specific date, set it here and save.
Email Scan Exclusions:	Domain names which will be excluded from the mail scan. Format = @domain.com. It is also possible to exclude particular pairs of correspondents – e.g. "@domain.com:fred@mycompany.com" excludes correspondence between fred and anyone in the "domain.com" domain.
Internal Email Domains:	Internal email domains format = @domain.com multiple can be comma separated. This is important to prevent tracking of private mail.
Mail Forms Information	Associates a particular user inbox with a pre-defined mail form. Contact Gold-Vision support for further details.
Omit Errors from Log	If Checked, mail scanning errors are not logged.
Store Attachments ¹	Select where to store the attachments
Open Attachments	Select method for opening attachments
Internal mail tracking options ²	Normally it is not desirable to track internal emails, but the system does allow for this.
Matching Mask	A Regular expression which is used in conjunction with the "when matching expression" internal tracking option to track some internal emails.
Post-Scan procedure	The name of a stored procedure which will be run at the end of each mail scan. Stored procedure would be custom-written for tasks such as email archiving.

¹**Store Attachments – In the database** is the standard option and holds email attachments in the Gold-Vision SQL database. The **Externally as files** option

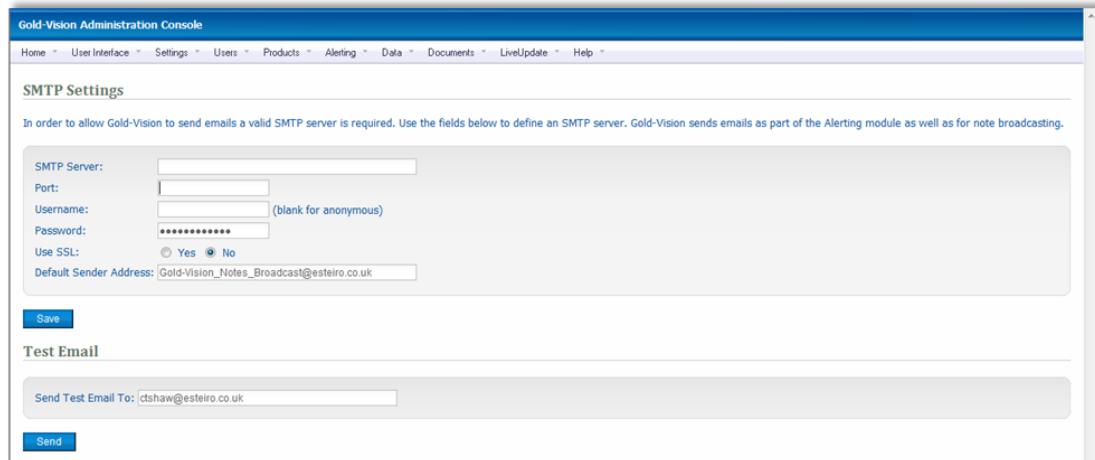

allows these attachments to be stored as real files in the file system. The subsequent values should then be entered as the local (on the server) and remote (for the user) locations of the attachment location (e.g. c:\program files\Esteiro\GVAttachments and <\\SERVER\GVAttachments>).

²Internal mail tracking options. These will only apply if Gold-Vision users are also present as Contacts in Gold-Vision.

- “Never”. Default option. Emails which are purely internal to the company are not tracked
- “When matching expression mask”. If the email subject matches the regular expression below, the email will be tracked.
- “Always” – internal emails are always scanned.

Settings > SMTP Settings

Gold-Vision uses an existing SMTP server when it needs to send emails on the users behalf – e.g. for Alerting or Note broadcasting. This screen allows the details of this server to be configured.

Gold-Vision Administration Console

Home User Interface Settings Users Products Alerting Data Documents LiveUpdate Help

SMTP Settings

In order to allow Gold-Vision to send emails a valid SMTP server is required. Use the fields below to define an SMTP server. Gold-Vision sends emails as part of the Alerting module as well as for note broadcasting.

SMTP Server:

Port:

Username: (blank for anonymous)

Password:

Use SSL: Yes No

Default Sender Address: Gold-Vision_Notes_Broadcast@esteiro.co.uk

Save

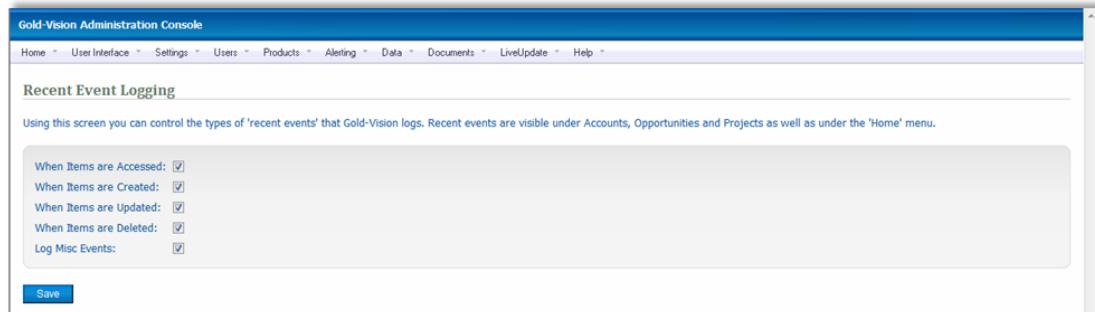

Test Email

Send Test Email To: ctshaw@esteiro.co.uk

Send

Settings > Recent Events Logging

Recent Events are the last 50 events per account. You can choose what Gold-Vision records as a recent event. For example, you may not be interested in logging when items were last accessed, allowing more space within the 50 events for notes, tracked e-mails, etc. *Please note that this is not a data filter – if you choose to not track these items, they will simply not be recorded in the database.*

Gold-Vision Administration Console

Home User Interface Settings Users Products Alerting Data Documents LiveUpdate Help

Recent Event Logging

Using this screen you can control the types of 'recent events' that Gold-Vision logs. Recent events are visible under Accounts, Opportunities and Projects as well as under the 'Home' menu.

When Items are Accessed:

When Items are Created:

When Items are Updated:

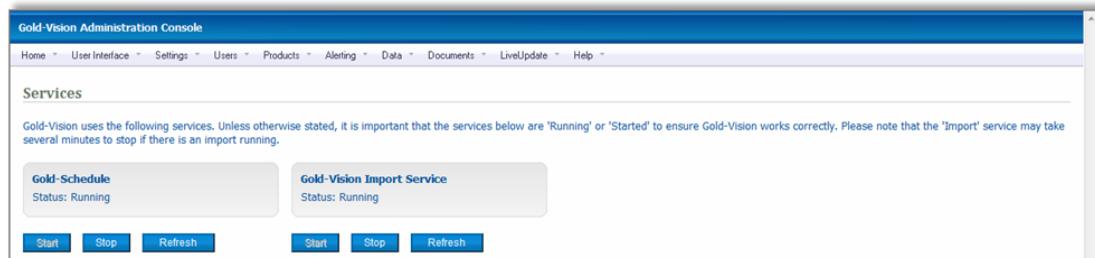

When Items are Deleted:

Services

Gold-Vision uses the following services. Unless otherwise stated, it is important that the services below are 'Running' or 'Started' to ensure Gold-Vision works correctly. Please note that the 'Import' service may take several minutes to stop if there is an import running.

Gold-Schedule Status: Running	Gold-Vision Import Service Status: Running
---	--

Start Stop Refresh **Start Stop Refresh**

Settings > Licencing

To view or update licencing information select **Settings** then **Licencing** from the menu. The licencing screen shows the current Licence key plus the numbers of licenced users and types. The Gold-Vision licence can also be updated using this screen.

Current Licence Key and Information

Customer Key: 3BA038F4-A256-4843-BCF5-F781F535367D
Customer Key: Expires on 05/07/2013

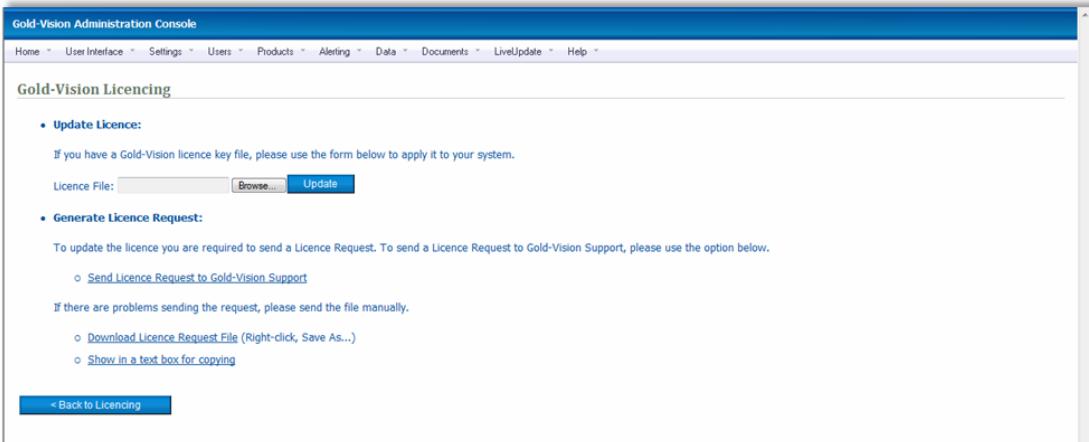

Licenced User Counts and Limits

Mail-Tracker Users: 0 / 0
Gold-Tracker Users: 4 / 0
Gold-Vision Users: 12 / 40

Total Users: 16 / 40
(Mobile Enabled: 1 / 40)
(Leads Enabled: 11 / 15)

Update Licence >

Updating a Licence – To update a licence a Licence File is required. Request a licence from this screen – it will be provided to you via email or download by Gold-Vision Support. When a licence file is received, save it in a convenient location. To apply a new licence key, use the **Update Licence** button.

Update Licence:
If you have a Gold-Vision licence key file, please use the form below to apply it to your system.
Licence File:

Generate Licence Request:
To update the licence you are required to send a Licence Request. To send a Licence Request to Gold-Vision Support, please use the option below.
 Send Licence Request to Gold-Vision Support
 If there are problems sending the request, please send the file manually.
 Download Licence Request File (Right-click, Save As...)
 Show in a text box for copying

< Back to Licencing

From the Licencing screen, browse to the saved file on your local machine and then hit **Update** to apply the Licence.

Exceeding the licence limits – If the number of users, types of user or expiry date is exceeded then access to Gold-Vision will be restricted. However, the Administration Console will still be accessible to make changes to the users or update the licence key.

Live Update

To open the Live Update screen either select **Live Update** then **Check for Updates** from the menu or alternatively click the **Check for product updates** option at the very bottom of the console screen. The Live Update screen allows Gold-Vision to check and install the latest updates to the product. It is recommended that Gold-Vision administrators check for updates periodically to ensure that the product is kept up to date.

Gold-Vision Live Update

Welcome to the Gold-Vision Live Update system. From here you can download and install key Gold-Vision updates. It is recommended that you install all available updates to ensure you are on the latest version. Please note that if you have a customised Gold-Vision installation you may need to stop the application before applying any updates.

[Check for updates](#)

Check for new updates

Automatic Notifications

When automatic notification is turned on Gold-Vision will check if new updates are available shortly after the administration console is loaded. If updates are available a reminder will appear linking to them. It is recommended that notifications are enabled to ensure Gold-Vision is up-to-date.

Live Update Notifications:

Enable update notifications

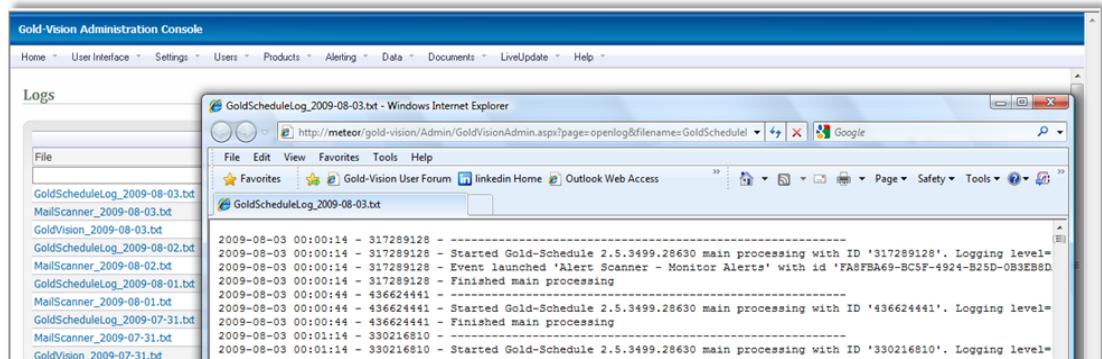

Check for updates – Click this link to check for updates. If updates are available please follow the on-screen instructions.

Turn on update notifications – When turned on, Gold-Vision will check for updates when the Administration Console is loaded and reports to the user if any are available.

Important Note: By default, Gold-Vision Live Update attempts to access the internet via port 80 **on the server**. If the Gold-Vision server uses a proxy server to access the internet, the address of the proxy can be configured in the **Global Settings**.

Settings > Logging > View Logs

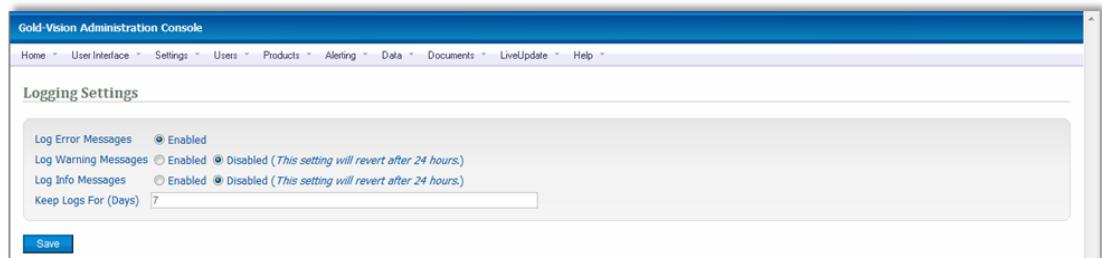

To view a list of all Gold-Vision logs select **Settings** then **Logging** then **View Logs** from the menu. When the Logs page is opened, it will look similar to that shown below. You can search for particular log files by name or the modified date (they are shown by default with the most recent first). To view a log, click on its name. The log will be opened in a new window.

The various types of log are detailed below. Where YYYY-MM-DD and similar are displayed, these represent date and time stamps. For lists of time-stamped logs, usually the last log in each sub-list is the latest due to the date stamp format. Log files are cleaned up by the mail tracking on a regular basis.

Log Name / Part Name	Details
Mailscanner_YYYY-MM-DD	These logs are generated by the synchronisation process.
GoldVisionLog_YYYY-MM-DD	These logs are generated by the Gold-Vision application and administration console
GoldScheduleLog_YYY-MM-DD.txt	Logs files for the Gold-Schedule service that runs mail tracking, mail synchronisation and other scheduled items.
ImportWinService_YYY-MM-DD.txt	Logs files for the Data Import Service.

Logging may be enhanced to identify problems. Typically, these settings will be changed in discussion with Gold-Vision support to allow more detailed logging.

5. Product Management

Gold-Vision contains a product database for use with Quotes. The **Administration Console** can be used to maintain the products held within the **Gold-Vision** database, as well as the "Product Groups" to which they belong. Gold-Vision products support multi-currency at variable and fixed prices as well as tax codes.

- **Products** – View and manage a list of Products.
- **Product Groups** – View and manage Product Groups.
- **Foreign Currencies** – Manage foreign currencies and exchange rates.
- **Price Lists** – Configure certain Price lists for specific Accounts.
- **Product Fixed-Prices** – Define optional specific currency or pricelist prices for individual products.
- **Tax Codes** – View and manage tax codes and rates.

Products > General Settings

Gold-Vision Administration Console

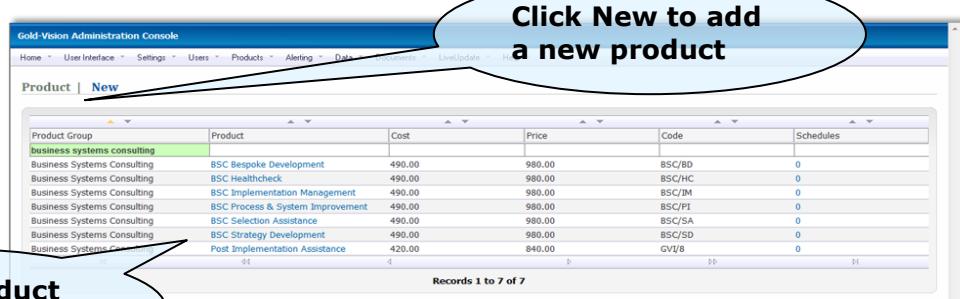

Home | User Interface | Settings | Users | Products | Alerting | Data | Documents | LiveUpdate | Help |

Product Settings

Lock closed Opportunities for non-Admin: <input checked="" type="radio"/> Yes <input type="radio"/> No	Allow list price changes for non-Admin: <input checked="" type="radio"/> Yes <input type="radio"/> No
Base Currency Symbol: £	Base Currency ISO Code: GBP
<input type="button" value="Save"/>	
Lock closed Opportunities for non-admin.	Yes – when accessing a closed opportunity, only administrators will be presented with an Open menu option, allowing further editing. The purpose of this is to ensure that historical sales information may be protected – especially if commissions are involved.
Allow list price changes for non-admin	Yes – This allows users to change the list price prior to discount. No – only the price after discount may be altered by non-administrators, therefore ensuring that true discounts are measured.
Base Currency Symbol	The base currency of the system would tend to be the main operating currency of the business or group. Please note that each user can set up their own preferred currency, allowing them to view opportunities in their own currencies.
Base Currency ISO Code	See Appendix C for a list of ISO Codes.

Products > Products

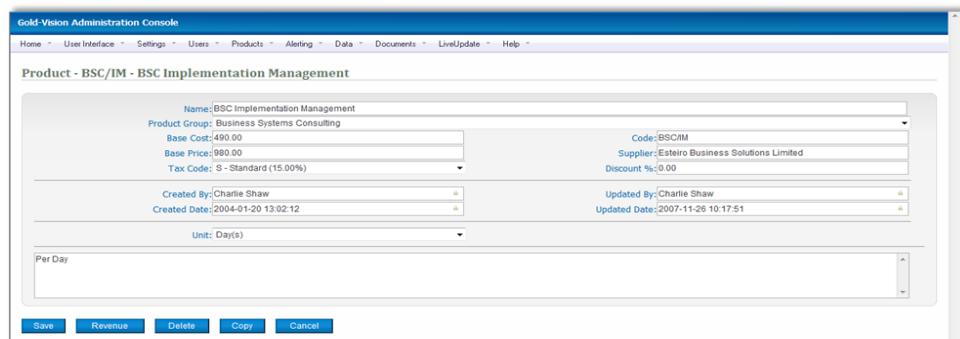

Select **Products** then **View Products** to view the product database. Products are listed in group and then name order.

Click New to add a new product

Click on a product to open for editing

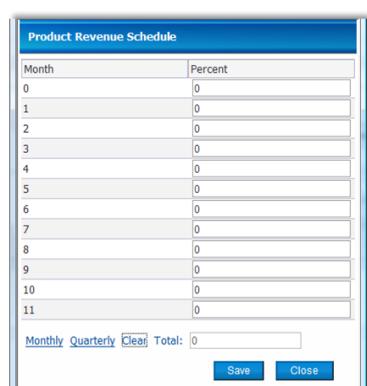

Editing an existing Product – To edit an existing product, click on its name from the list. The product edit screen will open in a new window. Make any changes necessary and then click **Save**. The Product Screen allows for the inclusion of user defined fields and is editable through the screen designer – see page 13.

Adding a new Product – To add a new product to the database, click the **New** icon in the top right hand corner or select **New** followed by **Product** from the menu. The new product screen will open in a new window. Enter the product details, select a **Product Group** and click **Save**.

Deleting a Product – To delete a product, open it by clicking on its name in the list then click the **Delete** button and confirm.

Moving a Product between Product Groups – To move a product between product groups, open it by clicking on its name then choose a new **Product Group** from the drop down selection. Finally, click **Save**.

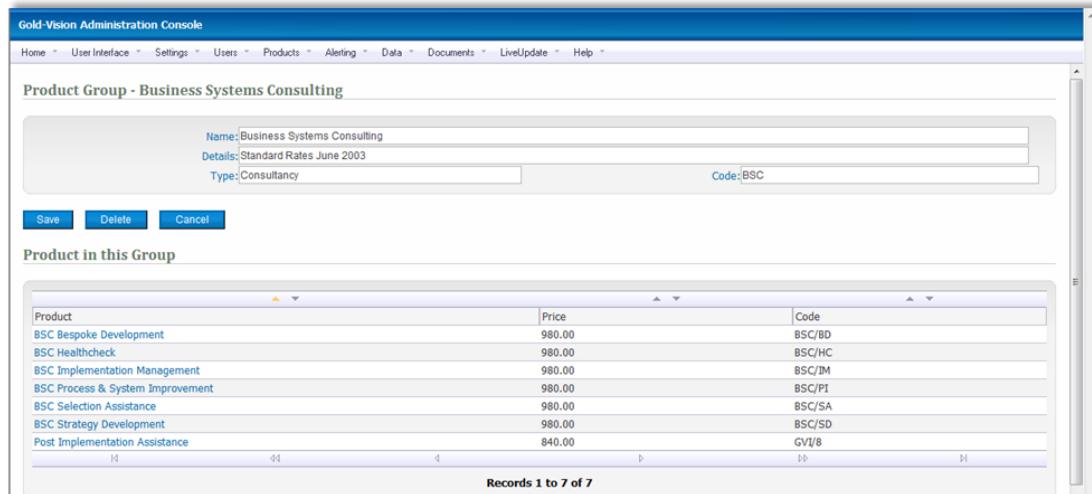

Product Revenue – A Revenue Schedule can be established for an individual product. To define this, click the **Revenue** button in the Product. You can then define the revenue manually (by percentage) or use the **Monthly** or **Quarterly** buttons to split evenly.

Products > Product Groups

Product Groups allow products to be categorised and/or organised more clearly. All products must belong to a group. Products can only belong to one group. To view a list of product groups, select **Products** then **View Product Groups** from the menu.

Editing an existing Product Group – To edit an existing product group, click on its name from the list. The product group edit screen will open in a new window. Make any changes necessary and then click **Save**.

The screenshot shows the Gold-Vision Administration Console interface. The top navigation bar includes links for Home, User Interface, Settings, Users, Products (which is currently selected), Alerting, Data, Documents, LiveUpdate, and Help. The main content area is titled "Product Group - Business Systems Consulting". It contains a summary box with fields: Name (Business Systems Consulting), Details (Standard Rates June 2003), Type (Consultancy), and Code (BSC). Below this are buttons for Save, Delete, and Cancel. A section titled "Product in this Group" displays a table of products, their prices, and codes. The table data is as follows:

Product	Price	Code
BSC Bespoke Development	980.00	BSC/BD
BSC Healthcheck	980.00	BSC/HC
BSC Implementation Management	980.00	BSC/IM
BSC Process & System Improvement	980.00	BSC/PSI
BSC Selection Assistance	980.00	BSC/SA
BSC Strategy Development	980.00	BSC/SD
Post Implementation Assistance	840.00	GVI/B

At the bottom of the table, it says "Records 1 to 7 of 7".

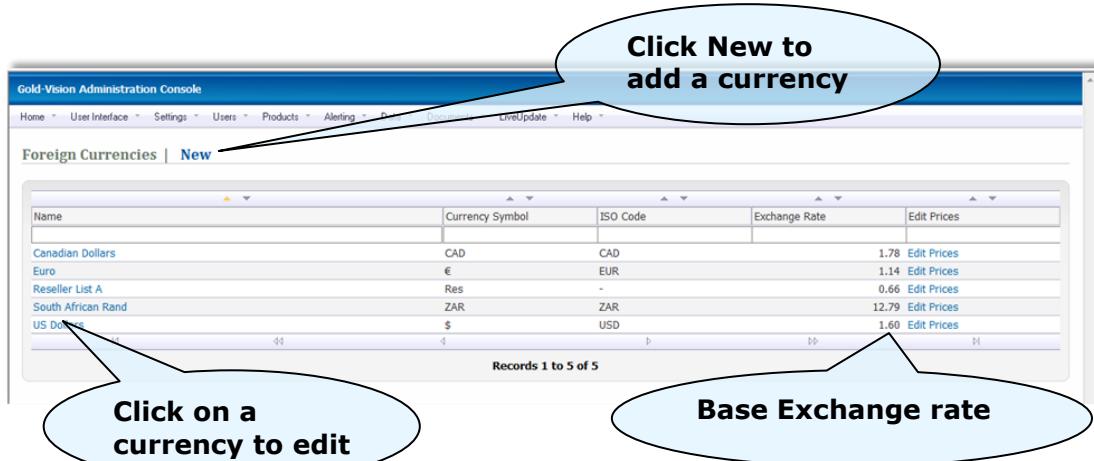

Adding a new Product Group – To add a new product group to the database click the **New** icon in the top right hand corner or select **New** followed by **Product Group** from the menu. The new product group screen will open in a new window. Enter a Summary plus any other optional details and click **Save**.

Deleting a Product Group – To delete a product group, open it by clicking on its name in the list then click the **Delete** button and confirm. *Please note: deleting a product group will also delete all products within the group.*

Adding a new Product to a Group – To add a new product to the database, click the **New** icon in the top right hand corner or select **New** followed by **Product** from the menu. The new product screen will open in a new window. Enter the product details, select a **Product Group** and click **Save**.

Products > Foreign Currencies

The Gold-Vision Quotation and Product system is fully multi-currency. Any number of foreign currencies with exchange rates can be added to the system. To view and manage foreign currencies select **Products** then **Foreign Currencies** from the menu.

Editing a Foreign Currency – To edit a foreign currency and/or change the base price exchange rate, click on its name from the list. This will open the currency edit screen in a new window. Each foreign currency must have a textual name, a symbol and also a base exchange rate. The **base exchange** rate is typically the number of units of the foreign currency which is equivalent to one unit of local/base currency. To save the changes click **Save**.

Adding a new Foreign Currency – To add a new foreign currency, either click the **New** icon at the top of the screen or select **New** then **Currency** from the menu.

Deleting a Foreign Currency – To delete an existing foreign currency, open it by clicking on its name and then click the **Delete** button and confirm.

Important Note: It is important to keep foreign currency exchange rates up to date to ensure that prices are accurate.

Foreign Currency Prices

If you want to view the Prices of all of your Products in a particular currency, click the **Edit Prices** button on the right-hand side of the **Foreign Currencies** list. This will allow you to view and edit particular converted prices in that currency.

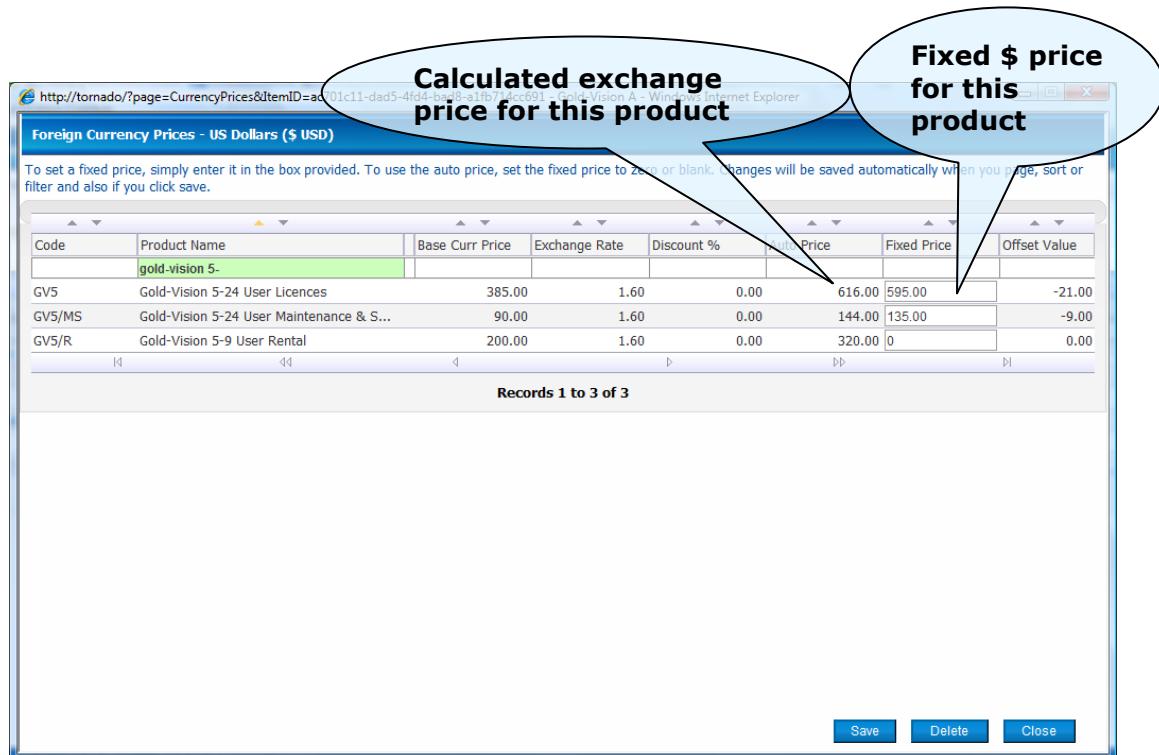

When using Products and Quotes with foreign currencies, Gold-Vision will automatically exchange the base price for the foreign currency equivalent. Whilst convenient, this does not always result in an appropriate number. Editing the prices for a currency allows to user to specify an exact, rounded price for a given product and currency.

The use of product currency fixed prices is completely optional and can be used on a per-product or currency basis. Take the example below:

Example: A product “**Product 1**” of price **£250** in base currency may convert to **\$472.49** in US Dollars. Whilst accurate, this does leave the US Dollar price at a seemingly random amount. The solution to this is to edit the **Foreign Currency Price** for “**Product 1**” in US Dollars for a more rounded value, say **\$475**.

Important Note: It is important to keep foreign currency exchange rates and “Product Currency” fixed prices up to date to ensure that prices are accurate.

The screen below shows the **Foreign Currency Prices** screen (in this case for US \$). There are some automatic prices and some fixed prices, as indicated.

Calculated exchange price for this product

Fixed \$ price for this product

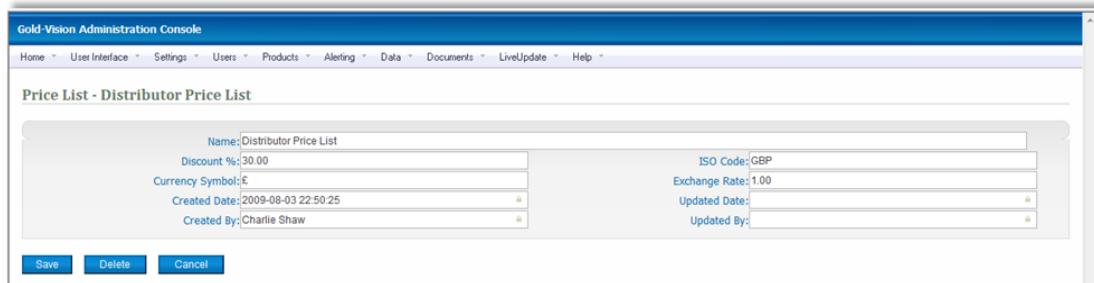

Code	Product Name	Base Curr Price	Exchange Rate	Discount %	Calculated Price	Fixed Price	Offset Value
GV5	Gold-Vision 5-24 User Licences	385.00	1.60	0.00	616.00	595.00	-21.00
GV5/MS	Gold-Vision 5-24 User Maintenance & S...	90.00	1.60	0.00	144.00	135.00	-9.00

Products > Price Lists

The Gold-Vision Quotation and Product system can make use of multiple price lists. Any number of price lists with different discount rates can be added to the system. To view and manage foreign currencies select **Products** then **Price Lists** from the menu.

Editing a Price List – To edit a price list and/or change the base price exchange rate or discount rate, click on its name from the list. This will open the Price List edit screen in a new window. Each Price List must have a textual name, a discount value, a symbol, ISO Code (see Appendix C) and also a base exchange rate. To save the changes click **Save**.

Adding a new Price List – To add a new price list, either click the **New** icon at the top of the screen or select **New** then **Price List** from the menu.

Deleting a Price List – To delete an existing Price List, open it by clicking on its name and then click the **Delete** button and confirm.

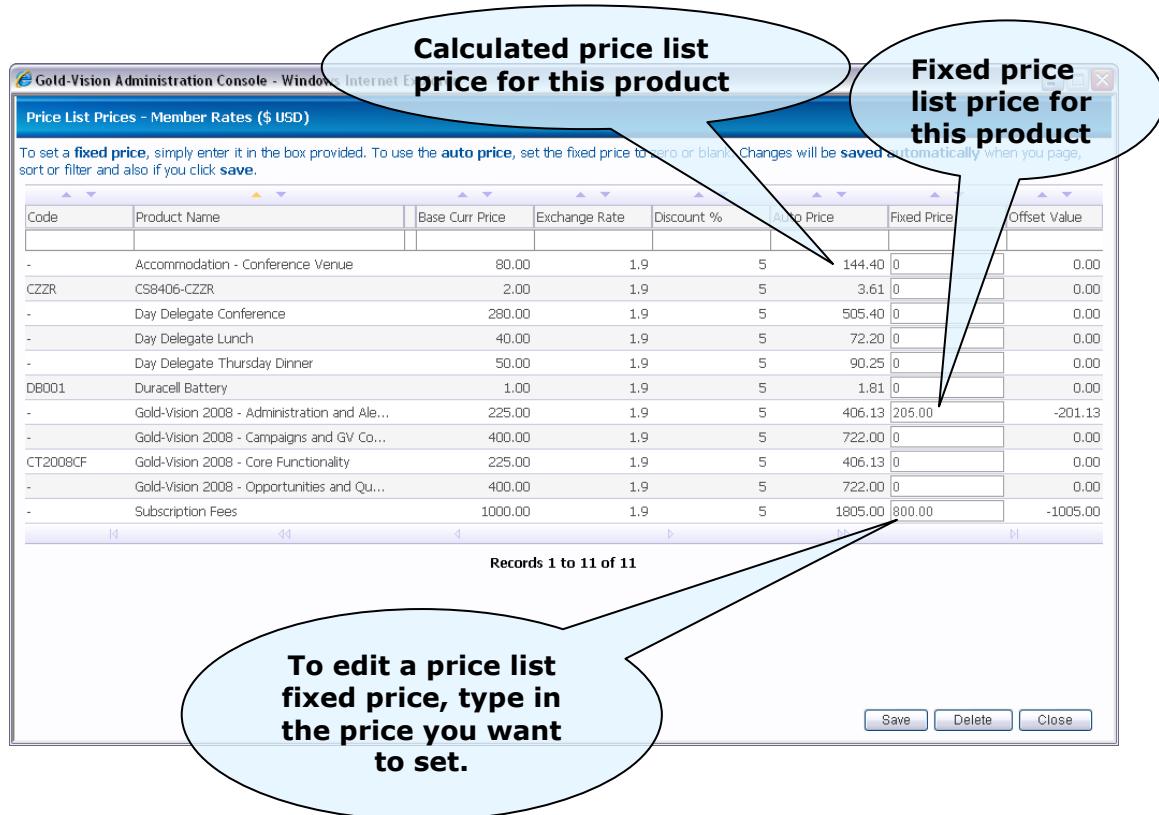

Important Note: It is important to keep Price List exchange rates and discount values up to date to ensure that prices are accurate.

Price List Prices

If you want to view the Prices of all of your Products under a particular Price List, click the **Edit Prices** button on the right-hand side of the **Price Lists** list. This will allow you to view and edit particular converted prices in that price list.

When using Products and Quotes with price lists, Gold-Vision will automatically exchange the base price for the price list equivalent. Whilst convenient, this does not always result in an appropriate number. Editing the prices for a price list allows the user to specify an exact, rounded price for a given product and currency.

The screen below shows the **Price List Prices** screen (in this case for the 'Members' Price List). There are some automatic prices and some fixed prices, as indicated.

Gold-Vision Administration Console - Windows Internet Explorer

Price List Prices - Member Rates (\$ USD)

To set a **fixed price**, simply enter it in the box provided. To use the **auto price**, set the fixed price to zero or blank. Changes will be **saved** automatically when you page, sort or filter and also if you click **save**.

Created By:	<input type="text"/>	Updated By:	<input type="text"/>
<input type="button" value="Save"/> <input type="button" value="Close"/>			

Products > Tax Codes

Each Gold-Vision product must be assigned a tax code. Tax codes represent the amount of tax which is added to a given item by default when creating quotations. To view a list of tax codes select **Products** then **Tax Codes** from the menu.

If tax codes are not required, are exempt or are zero-rated then there are appropriate tax codes for this.

Summary	Short Code	Tax Percentage
Exempt	E	0.00
N/A	N	0.00
Standard	S	15.00
Zero	Z	0.00

Records 1 to 4 of 4

Modifying an existing tax code – Click on the name of the tax code in the list to open the edit screen. Make any required changes and click **Save**.

Adding a new tax code – To add a new tax code, either click the **New** icon at the top of the screen or select **New** then **Tax Code** from the menu. Enter a summary/description, a short code and a percentage from 0 to 100.

Deleting a tax code – To delete a tax code, open it by clicking on its name in the list then click the **Delete** button and confirm. **Please Note:** Do not delete all tax codes or it will not be possible to add and manage products.

6. Alerting

N.B. The Gold-Vision Alerting module is not enabled by default on installation of Gold-Vision. Please contact Gold-Vision Support to discuss your requirements and get the functionality enabled.

Gold-Vision's alerting functionality is designed to integrate Gold-Vision more closely with a client's business process and work flow. Very often a business process will require that one person is aware of activities by a colleague in another team, or that users need to take actions in response to those activities. The Alerting module allows Gold-Vision to support such processes.

This section of the guide explains the key areas of setting up and managing alerts. **Appendix D** contains a number of example alert configurations for common examples.

Creating and Configuring Alerts

Alerting in the Administration Console allows the design, configuration and management of alert definitions. To view and configure alerts, select **Configure Alerts** from the **Alerting** menu.

This will display a list of the existing Alerts in the system, with their Types and Status. Those alerts which are Active (i.e. they will fire if the criteria are met) are indicated with a in the Active column.

New Alerts can be created by clicking the **New** button at the top right of the list.

Configure Alerts							
Title	Type	Description	Creator	Last Modified	Active	Delete	
Support Hold Notifica...	On-Save Alert	Account	Tim Beresford	16/05/2008 16:02:52	-		
Support Expiry in 1 ...	Reminder Alert	Account Reminder	Mark Vernon	16/05/2008 16:03:15	-		
New Support Issue	Custom Item	-	Mark Vernon	16/05/2008 16:03:30	-		
Licence Key Expiring ...	Reminder Alert	Profile Reminder	Mark Vernon	16/05/2008 16:04:10	<input checked="" type="checkbox"/>		

Records 1 to 4 of 4

Existing Alerts can be edited from this screen by clicking the Alert title to open it up.

Alerts can be deleted from this list by clicking the icon on the right hand side.

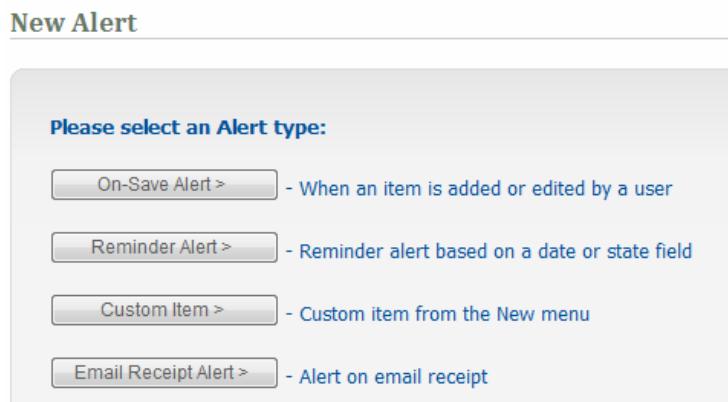

Types of Alert

There are 4 types of Alerts that can be configured:

- i. **On-Save Alert** - When a Gold-Vision item is saved, if specified criteria are met, then an alert can fire.
- ii. **Reminder Alert** - If an object does not change for a specified amount of time, an alert can fire.
- iii. **Custom Item** - 'Custom' items can be added to the homepage New menu, resulting in the creation of a certain object with defined fields already set.
- iv. **Email Receipt Alert** - Alert which will fire when emails are received which meet certain criteria.

In addition to this, there are also **Note Reminders**, which can be set when creating a note and will alert the creator of the note at the relevant point, and **Due Date Alerts** for Activities, which will alert the Owner of the Activity at the time and date as set in the **Due Date** field. These two types of Alert can only be created through the Gold-Vision user interface.

When a new Alert is created, you will be presented with the choice of which type of Alert you want to create from the three choices above (see screenshot below). Click on the type of Alert required to proceed.

You can then select which Gold-Vision object you wish to create your alert for – On-Save and Reminder Alerts are available for Accounts, Contacts, Opportunities, Projects, Profiles and Activities (all types). Custom Items can be created for Accounts, Opportunities, Projects and Activities.

Please select an alert template:

[< Back](#)

Description	Type
Account	On-Save Alert
Activity - Account	On-Save Alert
Activity - Contact	On-Save Alert
Activity - Opportunity	On-Save Alert
Activity - Project	On-Save Alert
Contact	On-Save Alert
Opportunity	On-Save Alert
Profile	On-Save Alert
Project	On-Save Alert

9 Records found

After selecting the object type you want an Alert for, the New Alert screen will open, as below. This allows you to input an Alert title (which will appear if a user is alerted in Gold-Vision as the Alert text), any Notes, then to add conditions and actions to the Alert.

Gold-Vision Administration Console - Windows Internet Explorer

Configure Alert - Insert Title Here

Alert Type: Account 'On-Save' - Created by Tim Beresford on 16/05/2008.

Alert Text: Account on Support Hold - This is displayed to user when alert fires.

Notes: Account

Alert Conditions - What causes this alert to 'fire'?

These conditions will be evaluated when items of type 'Account' are created or updated.

[Add Condition](#)

Alert Actions - What to do when alert conditions are met?

[Add Action](#)

This alert has been de-activated and therefore will not 'fire'. [Activate](#) [Save](#) [Close](#)

Once the Alert has been configured, it can be Saved and/or Activated using the buttons at the bottom of the item. Clicking **Activate** will automatically save the Alert. Once an Alert is Activated, it will then fire if the conditions are met.

[Activate](#) [Save](#) [Close](#)

The following describes how to configure the Alert Conditions and Actions that will determine when the alert fires and what happens when it does.

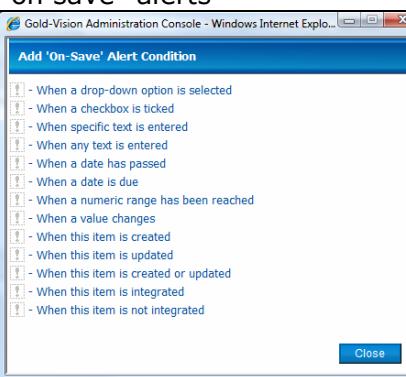

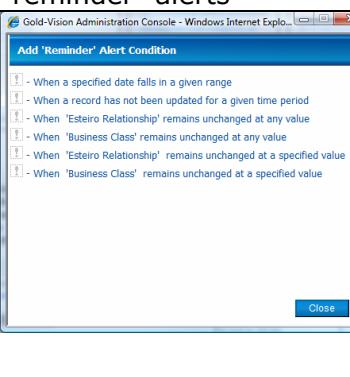

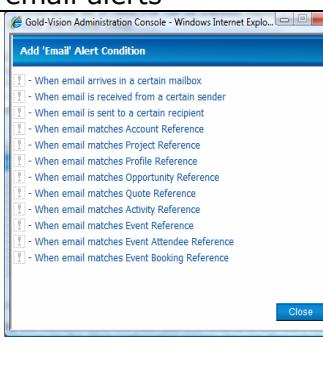

Alert Conditions

When creating On-Save and Reminder alerts, each will have a defined set of criteria that cause them to fire. For an On-Save alert, these conditions will relate to a value of a field (it could be of any type – dropdown, text, numeric, checkbox, date)

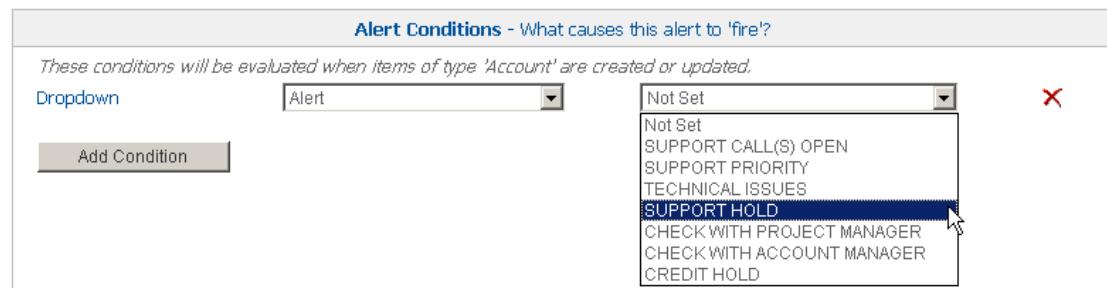

An Alert can have one or many conditions that need to be met. If there are multiple conditions specified, then *all conditions must be met* before the alert will fire.

For Reminder alerts, since these scan the database frequently for changes, there is a more constrained list of fields that can be checked. These are generally limited to date and 'status' fields.

To add a condition, click **Add Condition**. This will then ask you to select what type of condition you require, as shown below (see left screenshot for On-Save Alert). The exact options may vary depending on the object you chose). Reminder Alerts have a different set of Conditions to select from (see right screenshot below).

"on save" alerts	"reminder" alerts	email alerts
		

Selecting the relevant item will then add that criteria to the Alert Conditions list and return you to the Alert configuration screen. You can then select which field you want to evaluate (from the fields of the relevant type), and then which criteria you want to check for. For dropdown fields (as shown below), you can select the dropdown option you want to check for.

Once you selected the option for the first condition, you can continue to add further options with the **Add Condition** button. You can remove any conditions

you don't want using the  icon. **NB.** Alert conditions can only be Added or Removed when an Alert is **Deactivated**.

Alert Actions

When an On-Save or Reminder alert fires, the resulting Actions can be defined. The available actions include:

Alert (via Gold-Vision) – the simplest action, this causes an alert to be added to the recipients alert list and the home page Alert pop-up page to appear if the user is in Gold-Vision. Alerts can be directed to owner of the object, the Account Manager of the account the object belongs to, a specific Gold-Vision user or a specific Gold-Vision team.

Send an email - For Gold-Vision users who are not constantly in the Gold-Vision system or where a more formal notification is required, an email can be sent. This email will contain the text from the alert title and a link to the object that fired the alert. Emails can be sent to the owner of the object, the Account Manager of the account the object belongs to, a specific Gold-Vision user, a Specific Gold-Vision team or a specific email address.

Changing Data – Data in the item that triggered the alert can be altered.

Creating another item - This allows the alert to generate a new object with pre-filled in data, either inherited from the object or pre-set. Activities, Notes, Opportunities or Projects can be created, however, not all objects are available from every triggering object.

Changing Parent Data – Data in the items parent can be altered.

Alert Firing

When an alert fires, it will only fire once. If the item is edited and saved and the criteria fields are unchanged, the alert *will not* fire again. If however, one of the criteria fields changes away from the 'true' condition, then changes back at a later date, the alert *will* fire again.

Alert Status

An alert can be either **Active** which means it will fire if the defined criteria are met, or **Inactive**. This allows you to create Alerts without releasing them to the system, or to deactivate alerts that are no longer required.

Miscellaneous info – Nesting and Chaining

The flexible alert designer does allow the design of alerts which interact in undesirable ways. For example, the system would not stop you from designing a pair of alerts which play “tug of war” with the account type field.

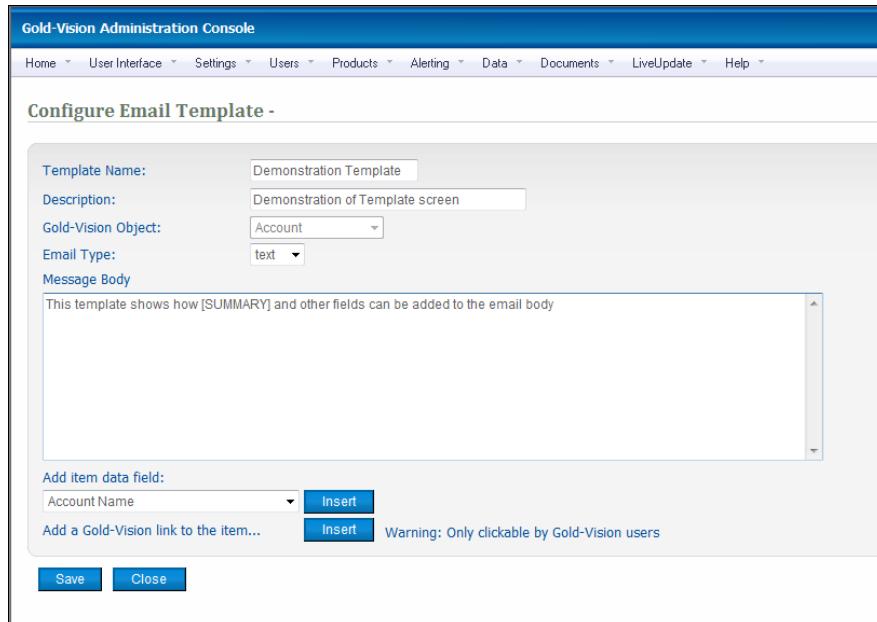

There are some technical safeguards in object alerts which prevent alerts from looping forever. Nonetheless we recommend that alerts should be thought through before implementation.

View Alerts

The **View Alerts** menu option allows you to see all of the Alerts that are currently Active in the system, and those that have been acknowledged or dismissed.

Email Templates

The Email Templates menu option allows you to design email templates which are used when an alert sends emails. Templates are specific to Gold-Vision object types, and are used to send emails containing information from the Gold-Vision records. The screen below shows the layout of the designer.

The screenshot shows the 'Configure Email Template' dialog box within the Gold-Vision Administration Console. The dialog has the following fields:

- Template Name:** Demonstration Template
- Description:** Demonstration of Template screen
- Gold-Vision Object:** Account
- Email Type:** text
- Message Body:** A text area containing the placeholder "[SUMMARY]" and a note: "This template shows how [SUMMARY] and other fields can be added to the email body".
- Add item data field:** A dropdown menu showing "Account Name" with an "Insert" button next to it.
- Add a Gold-Vision link to the item...** A button with an "Insert" link, accompanied by a note: "Warning: Only clickable by Gold-Vision users".
- Buttons:** "Save" and "Close" at the bottom.

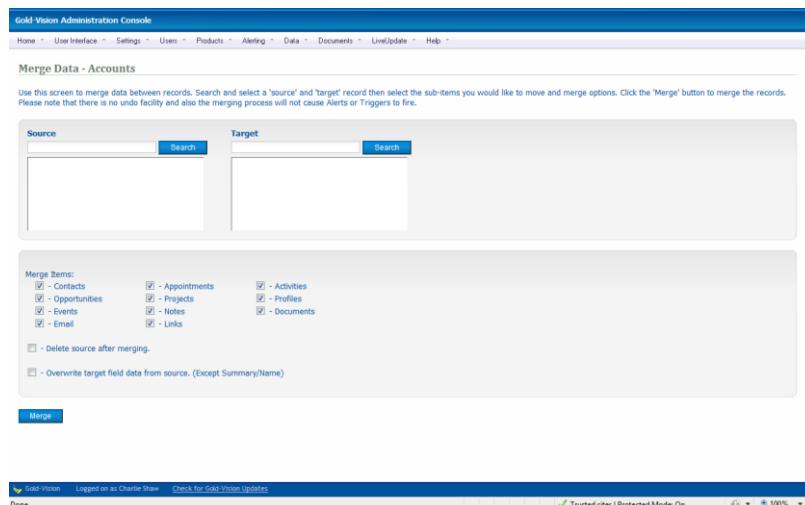

In the message body add the text required – you can also add any fields from the relevant Gold-Vision item by selecting the appropriate field and clicking Insert. You can also add a direct link to the Gold-Vision item (this is only clickable by Gold-Vision users).

7. Data

Data > Database Details

Summary screen showing for example database size, number of records

Data > Merge

Merge allows data and sub-items to be merged between two items. For example, if a duplicate account with a slightly different name has inadvertently been created and used, contact, email and note information could be merged from the duplicate to the original.

The facilities are accessed from the **Records** menu. There are three main options here, which allow you to merge the following associated items:

- Merge from **Account to Account**
- Merge from **Contact to Contact**

To merge items, use the Source and Target search lists to locate the parents of the items you want to merge. A * wildcard can be used to search within the item names. Once you have selected the specific items you wish as Source and Target in the lists, you can use the check boxes to determine which sub-items will be merged. Clicking **Merge** will execute the process.

Data > Undelete

If a user with rights to delete items from Gold-Vision deletes an item, this simply adds a deleted marker to the record(s) and removes it from the view.

Administrators may recover these records. Select from the menu the relevant item or sub-item that you wish to undelete, and filter down to the required item. Click on the Undelete icon to the right.

Selecting an item will undelete the sub items, for example, undeleting an Account will undelete all sub items at the same time.

Data > Apply Script

This allows you to run a script provided by Gold-Vision Support without requiring direct access to the server and SQL tools.

Data > TPS Import

Select and upload a TPS (Telephone Preference Service)file to upload to your Gold-Vision

Data > Import

Download the Data Import Client. Please see your Account Manager for more details.

Data > Outlook

View a list of Contacts, Appointments and Activities synchronised to Outlook.

Data > Lead Management

The Lead Management module provides an ideal environment for working on data outside of the main Gold-Vision system. For example you may wish to keep a number of lists for marketing and lead generation purposes. However, this data may not be in a state of accuracy, structure or completion where it can simply be loaded into the full CRM environment without compromising the existing data, and potentially triggering duplicate alerts. Typically, this data may have come from a source (e.g. web enquiry form, exhibition list etc) where that data may be incomplete and requiring qualification prior to inclusion in to Gold-Vision

Please contact your Account Manager or the Lead Management User Guide for more information.

8. Documents

Gold-Vision can generate Word documents from almost any item by using predefined Word Template (.dot) files. Templates are also used when running letter-based mail campaigns. The template file may contain Gold-Vision "tags", which are substituted with the corresponding item data when this feature is initiated. There are several template types, which are used depending on the area of the product from which the feature is initiated.

Documents > Template Settings

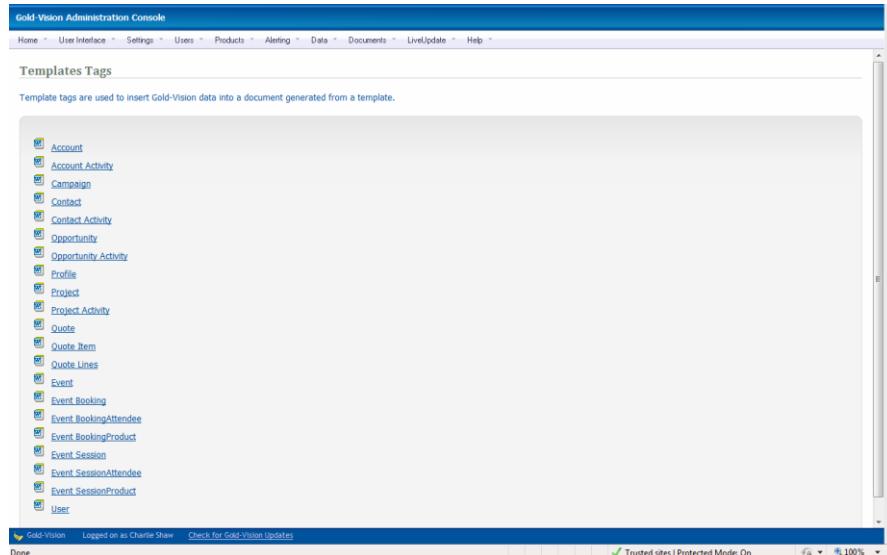

This setting determines the default template share in which Gold-Vision document templates are stored. The path can be either a UNC path or a web folder. There is a user-level setting which can be used to over-ride this one for individual users.

Gold-Vision templates are usually stored in the **Templates** sub folder of the program install folder. This folder should be shared to all users as **GVTemplates** to allow Gold-Vision access to the Word Template files. The templates folder has sub-folders divided by type of template and item type.

Documents > Template Tags

All template tags take the form of a keyword(s) within two chevrons (< and >). When Gold-Vision uses a template to create a document it will replace these tags with the corresponding data.

This screen allows you to view the list of current template tags for the main Gold-Vision objects – open as a document to cut and paste required items if you choose.

The screenshot shows the Gold-Vision Administration Console with the 'Templates Tags' page open. The page has a header 'Templates Tags' and a sub-header 'Template tags are used to insert Gold-Vision data into a document generated from a template.' Below this is a list of template tags categorized by object type. The categories and their sub-tags are as follows:

- Account: Account, Account Activity
- Account Activity: Contact
- Campaign: Contact
- Contact: Contact, Contact Activity
- Opportunity: Opportunity, Opportunity Activity
- Profile: Profile
- Project: Project, Project Activity
- Quote: Quote, Quote Item
- Quote Item: Quote Lines
- Quote Lines: Event
- Event: Event Booking
- Event Booking: Event BookingAttendee
- Event BookingAttendee: Event BookingProduct
- Event BookingProduct: Event Session
- Event Session: Event SessionAttendee
- Event SessionAttendee: Event SessionProduct
- User: User

At the bottom of the page, there is a navigation bar with links for 'Gold-Vision', 'Logged on as Charlie Shaw', 'Check for Gold-Vision Updates', 'Done', 'Trusted sites', 'Protected Mode: On', and a zoom control.

For example, the template text

```
<CONTACT>
<ACCOUNT>
<ADDRESS1>
<ADDRESS2>
<CITY>
<POSTCODE>

Dear Mr <LASTNAME>,
.....
Regards,
<ACCOUNTMANAGER>
```

could be used to create the following

```
John Smith
XYZ Company
Western House
1 Chester Street
London
SW1 1AB

Dear Mr Smith,
.....
Regards,
Paul Jones
```

Documents > Document Storage

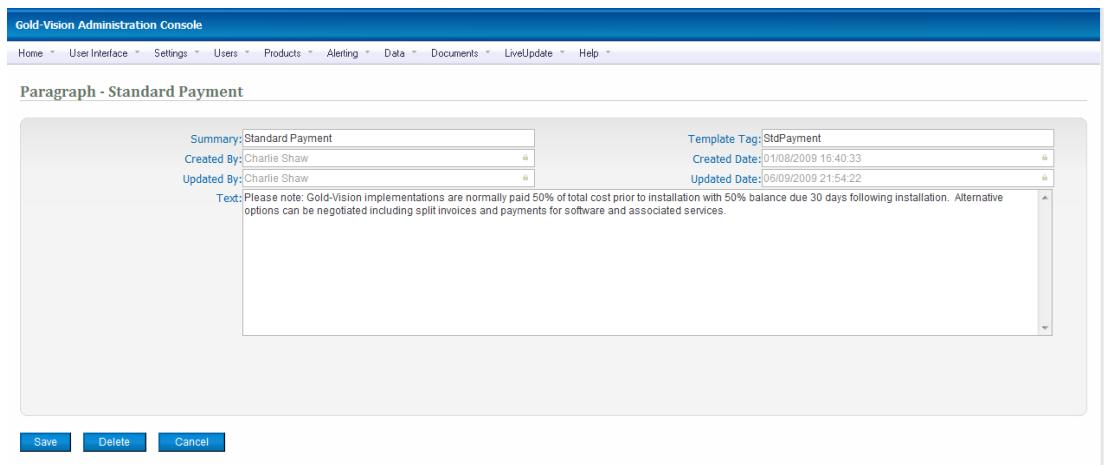

This screen controls a facility which automatically saves template documents as they are created. The "store root path" should be a path on, or accessible to, the Gold-Vision server. If checked, the "Auto-create sub folders" facility will create a sub-folder for an account when the Account is created.

Standard Paragraphs

A Paragraph is a large block of customisable text which can be used within templates when generating word documents from Gold-Vision. There are two options from the **Paragraphs** menu.

New Paragraph

This will create a new paragraph item (shown below). The **Template Tag** field will be what is used to make use of the paragraph in a template. You should enter the Tag without any arrow brackets (< >). To use the paragraph in a document, enter the tag in the usual way (e.g. the below would be <terms>). The **Text** field contains the text you want to substitute into the word document when the tag is used. Its also possible to associate a paragraph with a particular value of a drop-down field – see the section on configuring drop-down options for more details.

Summary: Standard Payment

Created By: Charlie Shaw

Updated By: Charlie Shaw

Template Tag: StdPayment

Created Date: 01/08/2009 16:40:33

Updated Date: 06/09/2009 21:54:22

Text: Please note: Gold-Vision implementations are normally paid 50% of total cost prior to installation with 50% balance due 30 days following installation. Alternative options can be negotiated including split invoices and payments for software and associated services.

Save Delete Cancel

View Paragraphs

This shows a list of the currently configured Paragraphs, with their template tags.

8. Help

The **Help** menu provides a number of options for assisting you with the administration of Gold-Vision.

- **Setup Guide** is a link to the Welcome Page.
- **Admin Help** is a link to online Gold-Vision Administration Help.
- **User Forum** is a link to the User forum. If you would like to register to be a forum user, please call or raise an electronic Support form for our support team.
- **Support Enquiry** – raise a support enquiry to Gold-Vision Support via the Gold-Vision website.
- **About** - Displays the About box for Gold-Vision.

Appendix A – Team Memberships and Security

Account Security

Security is based on a combination of which areas of Gold-Vision a User is entitled to see and whether the User is entitled to access the Account.

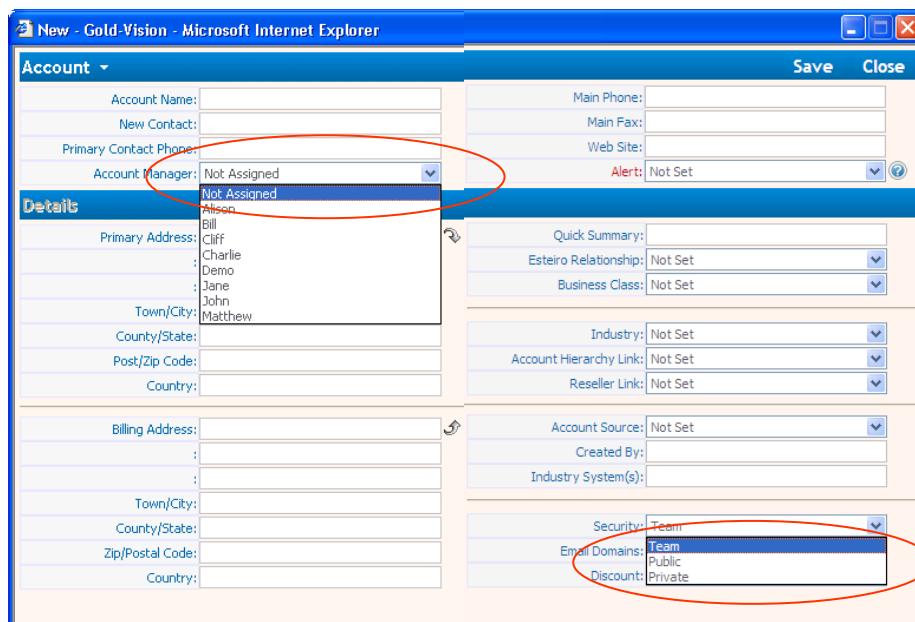

When setting up an Account, an Account Manager (i.e. your Account main owner) is selected, and a security level is selected from the following:

- **Public** Accounts are visible to everyone – again users only see the items that they are entitled to see.
- **Private** Accounts are only visible to the Account Manager and Administrators.
- **Team** Accounts are Visible to the Account Manager, other Users in their Team, and any additional Users or Teams that have been added as “Members”. Gold-Vision may be defaulted to any of these when creating new Accounts.

Consider the following example:

One Account is owned by one product team or business division. It is a Team Account and visible only to those selected Users. Typically, this would be where all contact is with the one Team or division. Overall Business Managers may be across the groups if they are either Administrators, or if they have been given Secondary Membership of those Teams.

Alternatively, an Account may be dealt with by all or several Product Teams or business divisions. This is notoriously difficult to manage where there are several databases. In this case, the Account may be set as Public, or additional Teams or Users may be added as Members.

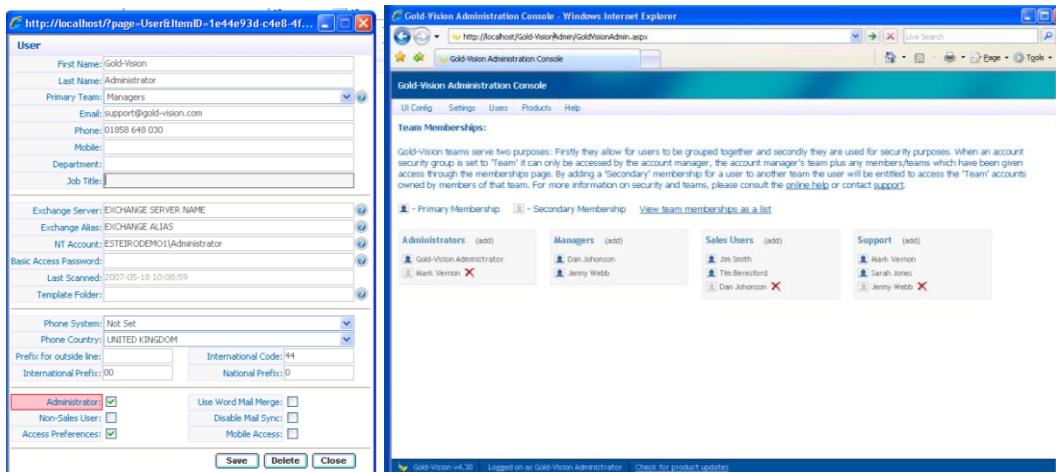

The screenshot shows the 'New - Gold-Vision - Microsoft Internet Explorer' window with the 'Account' form. The 'Account Manager' dropdown is set to 'Not Assigned' and is circled in red. The 'Security' dropdown at the bottom right is set to 'Team' and is also circled in red. Other fields like 'Account Name', 'Primary Contact', 'Main Phone', 'Main Fax', 'Web Site', 'Alert', 'Primary Address', 'Town/City', 'County/State', 'Post/Zip Code', 'Country', 'Billing Address', 'Town/City', 'County/State', 'Zip/Postal Code', 'Country', 'Quick Summary', 'Esteiro Relationship', 'Business Class', 'Industry', 'Account Hierarchy Link', 'Reseller Link', 'Account Source', 'Created By', 'Industry System(s)', 'Email Domains', and 'Discount' are visible but not circled.

It is important to understand that Gold-Vision follows a consistent security model – if a User is not given access to a Team/Private Account, it will be invisible to them. This means it will not show up on any of the list screens. However, if a user tries to create an account with duplicate information then Gold-Vision will warn them that there is a potential duplicate Account or Contact, and provide the name of the current Account Manager to speak to.

User Teams

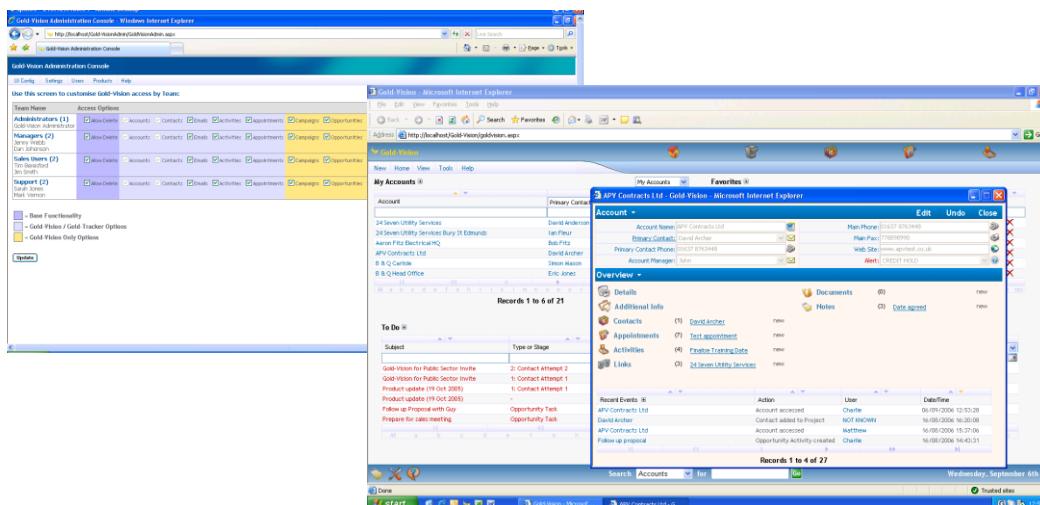

Users belong to a Primary Team, which is used to determine the areas of Gold-Vision that they see. They may also be attached to additional Teams to gain access to Accounts where that team has membership. The Primary Team is visible on the User Record, below left, and on a Team Memberships view, below right.

In this scenario, Phil is a Primary Member of the Support Team but let us assume that he is in a Pre-Sales Support Role. If security is enabled, Accounts that are visible to users in the Sales Team are also visible to Phil.

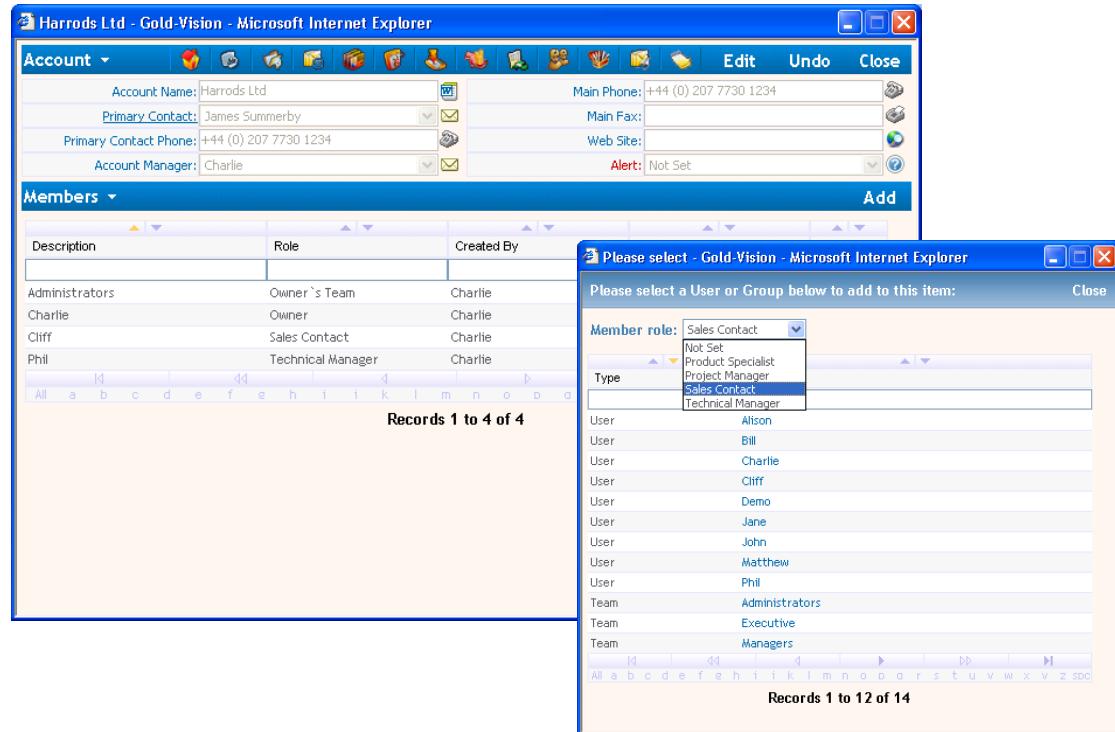

Team Access

Depending on a User Role, you may wish them to see all areas of Gold-Vision, or restrict their view across the system. Unwanted or restricted areas may simply be un-ticked for that Team. This also has the added benefit of simplifying the users' view of Gold-Vision – unwanted icons and menu options disappear – see bottom right screenshot.

Account Membership

Memberships provide more than a security role. Attached members may also be assigned a role, so that your Users can see who the relevant users are if they call in, for example. Naturally, the roles are definable by you. Carrying on from the previous example, Phil is assigned as the Sales Contact for this Account.

The screenshot shows the Gold-Vision Administration Console interface. The main window is titled "Harrods Ltd - Gold-Vision - Microsoft Internet Explorer" and is under the "Account" tab. It displays account details such as Account Name (Harrods Ltd), Primary Contact (James Summerby), Primary Contact Phone (+44 (0) 207 7730 1234), Account Manager (Charlie), Main Phone (+44 (0) 207 7730 1234), Main Fax, Web Site, and Alert (Not Set). Below this, the "Members" tab is selected, showing a list of members with columns for Description, Role, and Created By. The list includes Administrators, Charlie, Cliff, and Phil, each with their respective roles and created by Charlie. A modal dialog box titled "Please select - Gold-Vision - Microsoft Internet Explorer" is open, prompting the user to select a user or group. It shows a "Member role" dropdown set to "Sales Contact" and a list of users and teams. The users listed are Alison, Bill, Charlie, Cliff, Demo, Jane, John, Matthew, and Phil. The teams listed are Administrators, Executive, and Managers. The modal also shows "Records 1 to 12 of 14".

Appendix B – ISO Currency Codes

Gold-Vision Foreign Currencies makes use of the standard ISO currency codes. These are displayed below for a key set of currencies.

ISO Code	Currency
GBP	Pound sterling
EUR	Euro
USD	US Dollar
CAD	Canadian Dollar
AUS	Australian Dollar
NZD	New Zealand Dollar
SGD	Singapore Dollar
ZAR	South African Rand
JPY	Japanese Yen
HKD	Hong Kong Dollar
CHF	Swiss Franc
DKK	Danish Krone
SEK	Swedish Krona
NOK	Norwegian Krone

A complete list can be found at:

http://www.iso.org/iso/support/faqs/faqs_widely_used_standards/widely_used_standards_other/currency_codes/currency_codes_list-1.htm

Appendix C – Example Alert Configurations

User Scenarios

The alerting mechanism is clearly a flexible and powerful one, and we anticipate it being used in a great many ways. Here are some examples

Notify recipient if a new project activity is created. It may be standard company practice to create Project activities and assign them to relevant colleagues. An alert to the owner of an activity when it's created will ensure that the colleague is aware of the new item.

Alert account managers of possible account problems. For example, an alert might be generated for the account manager of any account who's type is set to "ex-customer".

Monitor "stuck" or "Dormant" processes. For example, If an opportunity stays at the same stage for 6 months, an activity might be generated for the account manager to review.

If an activity of type "support" remains open for more than 24 hours, an alert to a support manager might be generated.

The following examples...

- Account on Support Hold
- Account becoming Customer
- Support Activity open for more than 5 days
- Licence Key about to Expire
- Creating a Project when an Opportunity is Won

Appendix D – Example Mail Tracking by Clients type

The Mail Scanner in Gold-Vision 2009 allows a variety of different mail systems to be scanned. The examples below show typical set-ups for each type.

Redemption/CDO

This is the “conventional” email setup, as used in previous versions of Gold-Vision. The server name will be an Exchange server, and the alias as can be found via the Exchange management console or Active Directory Users and Computers.

Mailbox Connection String	
Connection Type	CDO/Redemption library
Server Host, Name or IP Address	vulcan
Username / Exchange Alias	fredsmith
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Exchange Web Services

Mailbox Connection String	
Connection Type	Exchange 2007 Web Service
Server Host, Name or IP Address	https://vulcan.esteiro.local/ews/exchange.asmx
Username / Exchange Alias	fredsmith@volcano.com
Web Service Username (Optional)	
Web Service Password (Optional)	
<input type="button" value="Save"/> <input type="button" value="Cancel"/>	

Exchange 2007 and above offer Exchange Web services as an interface. This may prove more flexible over distributed networks.

The EWS configuration path will generally be of the form shown above, and the email address will be the users primary SMTP address. The username and

password are optional, but allow control over who the software attempts to authenticate as.

IMAP Services

Imap is offered by a number of ISP's and mail service providers including Google Mail. It is also available as an option for Exchange 2007 and above. The IMAP interface will only allow scanning of emails – Appoints, tasks and contacts are not presented through the interface.

Mailbox Connection String	
Connection Type	IMAP
Server Host, Name or IP Address	imap.gmail.com
Username / Exchange Alias	fredsmith@gmail.com
Password (Optional)	*****
SSL (IMAP Only)	<input checked="" type="checkbox"/>
Save Cancel	

IMAP requires fairly straightforward information – the server address, user name and password.

Remote CDO Library

This can be used to access an Exchange server which is not in a common domain or AD structure with the Gold-Vision server, or is physically separated. This is a "special order" configuration – contact Gold-Vision support for details.

Mailbox Connection String

Connection Type	Remote CDO/Redemption library
Server Host, Name or IP Address	vulcan
Username / Exchange Alias	fredsmith
Remote Server Name (Optional)	Hoppity:8000

Save **Cancel**

Much of the information is the same as for the CDO/Redemption client, but the remote server will have the actual mail scanner component installed on it. The last line of the configuration shows the remote server name and port number.

The remote component would need to be installed and configured on the remote server.
